Automatic Control with Interactive Tools José Luis Guzmán, Ramon Costa-Castelló, Manuel Berenguel, Sebastián Dormido, 2023-06-27 Automatic Control with Interactive Tools is a textbook for undergraduate study of automatic control Providing a clear course structure and covering concepts taught in engineering degrees this book is an ideal companion to those studying or teaching automatic control The authors have used this text successfully to teach their students By providing unique interactive tools which have been designed to illustrate the most important automatic control concepts Automatic Control with Interactive Tools helps students overcome the potential barriers presented by the significant mathematical content of automatic control courses Even when they have previously had only the benefit of an introductory control course the software tools presented will help readers to get to grips with the use of such techniques as

differential equations linear algebra and differential geometry This textbook covers the breadth of automatic control topics including time responses of dynamic systems the Nyquist criterion and PID control It switches smoothly between analytical and practical approaches Automatic Control with Interactive Tools offers a clear introduction to automatic control ideal for undergraduate students instructors and anyone wishing to familiarize themselves with the fundamentals of the subject

Automatic Control Systems Benjamin C. Kuo,1995 Real world applications Integrates real world analysis and design applications throughout the text Examples include the sun seeker system the liquid level control dc motor control and space vehicle payload control Examples and problems Includes an abundance of illustrative examples and problems Marginal notes throughout the text highlight important points

Digital Control Systems Anastasia Veloni,Nikolaos Miridakis,2017-08-07 The objective of this book is to provide a collection of solved problems on control systems with an emphasis on practical problems System functionality is described the modeling process is explained the problem solution is introduced and the derived results are discussed Each chapter ends with a discussion on applying MATLAB LabVIEW and or Comprehensive Control to the previously introduced concepts The aim of the book is to help an average reader understand the concepts of control systems through problems and applications The solutions are based directly on math formulas given in extensive tables throughout the text

Classical Control System Kunal Chakraborty,2016-04-15 The Temperature measurement of liquid in a tank can be controlled by classical and advance control algorithms applying PID FUZZY LOGIC SFB LQR Here we consider a three tank noninteracting system We observed that tank1 affects the dynamic behavior of tank2 Similarly tank2 affects the dynamic behavior of tank3 and vice versa because the flow rate F_1 depends on the difference between liquid levels h_1 and h_2 Thus a change in the inlet flowrate affects the liquid level in the tank which in turn affects the temperature of the liquid Basically it is a thermal process Various types of temperature sensors include RTD T C and Thermistor In this particular project the author used a mercury thermometer as sensor Mathematical models of the three tank method give a third order equation Each tank gives a transfer function of the first order system They make it easy to check whether a particular algorithm is giving the requisite results A lot of work has been carried out on the temperature control in terms of its stabilization Many attempts have been made to control the response of temperature measuring systems
