Wind Power Systems Lingfeng Wang, Chanan Singh, Andrew Kusiak, 2010-09-15 Renewable energy sources such as wind power have attracted much attention because they are environmentally friendly do not produce carbon dioxide and other emitants and can enhance a nation s energy security For example recently more significant amounts of wind power are being integrated into conventional power grids Therefore it is necessary to address various important and challenging issues related to wind power systems which are significantly different from the traditional generation systems This book is a resource for engineers practitioners and decision makers interested in studying or using the power of computational intelligence based algorithms in handling various important problems in wind power systems at the levels of power generation transmission and distribution Researchers have been developing biologically inspired algorithms in a wide variety of complex large scale engineering domains Distinguished from the traditional analytical methods the new methods usually accomplish the task through their computationally efficient mechanisms Computational intelligence methods such as evolutionary computation neural networks and fuzzy systems have attracted much attention in electric power systems Meanwhile modern electric power systems are becoming more and more complex in order to meet the growing electricity market In particular the grid complexity is continuously enhanced by the integration of intermittent wind power as well as the current restructuring efforts in electricity industry Quite often the traditional analytical methods become less efficient or even unable to handle this increased complexity As a result it is natural to apply computational intelligence as a powerful tool to deal with various important and pressing problems in the current wind power systems This book presents the state of the art development in the field of computational intelligence applied to wind power systems by reviewing the most up to date work and representative practical problems collecting contributions from leading experts in electrical engineering system engineering and other disciplines

Falcão, Nazanin Vafaei, Shirin Najdi, 2016-03-24 This book constitutes the refereed proceedings of the 7th IFIP WG 5.5 SOCOLNET Advanced Doctoral Conference on Computing Electrical and Industrial Systems DoCEIS 2016 held in Costa de Caparica Portugal in April 2016 The 53 revised full papers were carefully reviewed and selected from 112 submissions The papers present selected results produced in engineering doctoral programs and focus on research development and application of cyber physical systems Research results and ongoing work are presented illustrated and discussed in the following areas enterprise collaborative networks ontologies Petri nets manufacturing systems biomedical applications intelligent environments control and fault tolerance optimization and decision support wireless technologies energy smart grids renewables management and optimization bio energy and electronics

Integration of Alternative Sources of Energy Felix A. Farret, M. Godoy Simoes, 2006-04-20 A unique electrical engineering approach to alternative sources of energy Unlike other books that deal with alternative sources of energy from a mechanical point of view Integration of

Alternative Sources of Energy takes an electrical engineering perspective. Moreover, the authors examine the full spectrum of alternative and renewable energy with the goal of developing viable methods of integrating energy sources and storage efficiently. Readers become thoroughly conversant with the principles, possibilities, and limits of alternative and renewable energy. The book begins with a general introduction and then reviews principles of thermodynamics. Next, the authors explore both common and up-and-coming alternative energy sources, including hydro, wind, solar, photovoltaic, thermosolar, fuel cells, and biomass. Following that are discussions of microturbines and induction generators, as well as a special chapter dedicated to energy storage systems. After setting forth the fundamentals, the authors focus on how to integrate the various energy sources for electrical power production. Discussions related to system operation, maintenance, and management, as well as standards for interconnection, are also set forth. Throughout the book, diagrams are provided to demonstrate the electrical operation of all the systems that are presented. In addition, extensive use of examples helps readers better grasp how integration of alternative energy sources can be accomplished. The final chapter gives readers the opportunity to learn about the HOMER Micropower Optimization Model. This computer model, developed by the National Renewable Energy Laboratory (NREL), assists in the design of micropower systems and facilitates comparisons of power generation techniques. Readers can download the software from the NREL Web site. This book is a must-read for engineers, consultants, regulators, and environmentalists involved in energy production and delivery, helping them evaluate alternative energy sources and integrate them into an efficient energy delivery system. It is also a superior textbook for upper-level undergraduates and graduate students.

Smart Grid as a Solution for Renewable and Efficient Energy Ahmad, Ayaz, Hassan, Naveed Ul, 2016-04-20. As the need for proficient power resources continues to grow, it is becoming increasingly important to implement new strategies and technologies in energy distribution to meet consumption needs. The employment of smart grid networks assists in the efficient allocation of energy resources. Smart Grid as a Solution for Renewable and Efficient Energy features emergent research and trends in energy consumption and management, as well as communication techniques utilized to monitor power transmission and usage. Emphasizing developments and challenges occurring in the field, this book is a critical resource for researchers and students concerned with signal processing, power demand management, energy storage procedures, and control techniques within smart grid networks.

Spectral Discretization-Based Eigen-Analysis of Time-Delay Systems Hua Ye, Yutian Liu, Xiaofan Jia, 2025-07-04. This book focuses on the partial spectral discretization (PSD) based eigenvalue computation methods for large-scale time delay systems. Due to past dependence in the evolution of a system, time delays may greatly affect the system's dynamics. For example, wide-area damping controllers in interconnected power systems are fed by remote synchrophasor measurements and thus inevitably introduce time delays into the control loop. These delays, ranging from tens to hundreds of milliseconds, can deteriorate the performance of the controllers and further jeopardize the power system stability. Therefore, this book addresses two classes of efficient

eigenvalue computation methods for time delay systems based on the PSD idea as well as their applications to power systems with inclusion of time delays The methods are expected to obtain the accurate stability boundary of time delay systems with affordable computational burden This book would appeal to engineers researchers and graduate students in power and control engineering as well as computational and applied mathematicians [Integration of Renewable Sources of Energy](#) Felix A.
