**Sensory Processes and Perception**

Sensations

1. What is sensation?  
Sensation is the process by which our senses gather information and send it to the brain.
2. What is the first link in the chain for every sensory system?  
It is a cell called sensory receptors.
3. Where are sensory receptors housed? Give examples of these organs.  
They are housed in sense organs such as ears, eyes and skin.

Sensory Thresholds: How Much Stimulation is Enough?

4. What is an absolute threshold?  
It is the point where something becomes noticeable to our senses. It is the softest sound we can hear or the slightest touch we can feel. Anything less than this goes unnoticed. The absolute threshold is therefore the point at which a stimulus goes from undetectable to detectable to our senses.
5. What is the different threshold?  
It is the minimum difference in intensity between two stimuli that one can detect. For example adding one pound to the five pounds you hold is noticeable because you increased the weight by 20%. On the other hand if you add one pounds to the 50 pounds you hold, you will not notice the difference because you increased the weight by only 2%.

Sensory Adaption

6. What does a sensory adaption enables a person to do? Give example.  
It enables a person to find balance with the surroundings and efficiently respond to changes in stimuli. For example we hear the noise of a refrigerator when we enter the kitchen, but after a short time the sound fades and we no longer hear consciously hear the noise. In this case our sense of hearing has adapted to it.
7. The phenomenon of sensory adaption occurs in all senses except one. What is it?  
The sense of pain.
8. How many senses do we have? What are they?  
We have five senses: sight, smell, taste, touch and hearing.
9. How do sensory receptors respond to physical stimuli?  
They respond to physical stimuli by producing electrical changes that can initiate neural impulses in sensory neurons.
10. What is the role of sensory neurons?
