General Relativity An Einstein Centenary Survey:

General Relativity; an Einstein Centenary Survey S. W. Hawking, W. Israel, 1980-08-28 General Relativity Stephen William Hawking, W. Israel, 1979 **General Relativity: An introductory survey** W. Israel, Hawking, Stephen W. Hawking, 2010 **Theoretical Foundations Of Cosmology: Introduction To The Global Structure Of Space-time** Michael Heller, 1992-04-15 The book's principal aim is to clarify fundamental concepts decipher mathematical structures used to model space time and relativistic worlds and to disclose their physical meaning After each chapter philosophical implications of the presented material are commented upon Both special and general theories of relativity are presented in the book with the stress on their global aspects Although global mathematical methods are extensively used throughout the book the definitions of new concepts short comments and examples make reading smooth without the need to consult other textbooks or review papers *Approaches to Quantum Gravity* Daniele Oriti, 2009-03-05 The theory of quantum gravity promises a revolutionary new understanding of gravity and spacetime valid from microscopic to cosmological distances Research in this field involves an exciting blend of rigorous mathematics and bold speculations foundational questions and technical issues Containing contributions from leading researchers in this field this book presents the fundamental issues involved in the construction of a quantum theory of gravity and building up a quantum picture of space and time It introduces the most current approaches to this problem and reviews their main achievements Each part ends in questions and answers in which the contributors explore the merits and problems of the various approaches This book provides a complete overview of this field from the frontiers of theoretical physics research for graduate students and researchers Physics of Black Holes I. Novikov, V. Frolov, 2013-03-09 One of the most exciting predictions of Einstein's theory of gravitation is that there may exist black holes putative objects whose gravitational fields are so strong that no physical bodies and signals can break free of their pull and escape Even though a completely reliable discovery of a black hole has not yet been made several objects among those scrutinized by astrophysicists will very likely be conformed as black holes The proof that they do exist and an analysis of their properties would have a significance going far beyond astrophysics Indeed what is involved is not just the discovery of yet another even if extremely remarkable astrophysical object but a test of the correctness of our understanding the properties of space and time in extremely strong gravitational fields Theoretical research into the properties of black holes and into the possible corollaries of the hypothesis that they exist has been carried out with special vigor since the beginning of the 1970s In addition to those specific features of black holes that are important for the interpretation of their possible astrophysical manifestations the theory has revealed a number of unexpected characteristics of physical interactions involving black holes By now a fairly detailed understanding has been achieved of the properties of the black holes their possible astrophysical manifestations and the specifics of the various physical processes involved Furthermore profound links were found between black hole theory and such seemingly very distant fields as thermodynamics information theory and

quantum theory **Inner Space/Outer Space** Edward Kolb, Fermi National Accelerator Laboratory, 1986-04 Inner Space Outer Space brings together much of the exciting work contributing to a new synthesis of modern physics Particle physicists concerned with the inner space of the atom are making discoveries that their colleagues in astrophysics studying outer space can use to develop and test hypotheses about the events that occurred in the microseconds after the Big Bang and that shaped the universe as we know it today The papers collected here from scores of scientists constitute the proceedings of the first major international conference on research at the interface of particle physics and astrophysics held in May 1984 The editors have written introductions to each major section that draw out the central themes and elaborate on the primary implications of the papers that follow Tensor-Based Dynamical Systems Can Chen, 2024-03-04 This book provides a comprehensive review on tensor algebra including tensor products tensor unfolding tensor eigenvalues and tensor decompositions Tensors are multidimensional arrays generalized from vectors and matrices which can capture higher order interactions within multiway data In addition tensors have wide applications in many domains such as signal processing machine learning and data analysis and the author explores the role of tensors tensor algebra in tensor based dynamical systems where system evolutions are captured through various tensor products The author provides an overview of existing literature on the topic and aims to inspire readers to learn develop and apply the framework of tensor based dynamical systems Proceedings of the Second Marcel Grossmann Meeting on General Relativity International Centre for Theoretical Physics, 1982 **Quantum Gravity** Carlo Rovelli, 2007-11-29 Quantum gravity is perhaps the most important open problem in fundamental physics It is the problem of merging quantum mechanics and general relativity the two great conceptual revolutions in the physics of the twentieth century The loop and spinfoam approach presented in this 2004 book is one of the leading research programs in the field The first part of the book discusses the reformulation of the basis of classical and quantum Hamiltonian physics required by general relativity The second part covers the basic technical research directions Appendices include a detailed history of the subject of quantum gravity hard to find mathematical material and a discussion of some philosophical issues raised by the subject This fascinating text is ideal for graduate students entering the field as well as researchers already working in quantum gravity It will also appeal to philosophers and other scholars interested in the nature of space and time Proceedings of the Third Marcel Grossmann Meeting on General Relativity Ning Hu, 1983 Proceedings of the Second Marcel Grossmann Meeting on General Relativity Remo Ruffini, 1982 Acta Physica Polonica , 1998 **Cosmology and Elementary Particles** Daniel R. Zee, 1988 Covers the whole frontier of particle cosmology from early universe and inflationary cosmology to phase transition and cosmic string Other areas explored include dark matter neutrino and axion problems baryonsynthesis formation of large scale structure and distribution and evolution of clusters and galaxies For postgraduates and researchers Annotation copyrighted by Book News Inc Portland OR **International Workshop on Superstrings,**
