Polynomials with Special Regard to Reducibility A. Schinzel, 2000-04-27 This book covers most of the known results on reducibility of polynomials over arbitrary fields algebraically closed fields and finitely generated fields Results valid only over finite fields local fields or the rational field are not covered here but several theorems on reducibility of polynomials over number fields that are either totally real or complex multiplication fields are included Some of these results are based on recent work of E Bombieri and U Zannier presented here by Zannier in an appendix The book also treats other subjects like Ritt s theory of composition of polynomials and properties of the Mahler measure and it concludes with a bibliography of over 300 items This unique work will be a necessary resource for all number theorists and researchers in related fields

Military Assistance on Request and the Use of Force Erika De Wet, 2020-03-26 In countries such as Syria Iraq South Sudan and Yemen internationally recognized governments embroiled in protracted armed conflicts and with very little control over their territory have requested direct military assistance from other states These requests are often accepted by the other states despite the circumvention of the United Nations Security Council and extensive violation of international humanitarian law and human rights In this book Erika De Wet examines the authority entitled to extend a request for or consent to direct military assistance as well as the type of situations during which such assistance may be requested notably whether it may be requested during a civil war Ultimately De Wet addresses the question of if and to what extent the proliferation of military assistance on the request of a recognized government is changing the rules in international law applying to the use of force
