dynamics of the algebra classroom From within this setting Daniel Chazan thoughtfully explores topics that concern all
dedicated educators how to really know one s students how to find engaging material and how to inspire meaningful
classroom conversations Throughout he addresses the predicaments that are central to the lives of teachers who work in
standard educational settings By highlighting teaching dilemmas Chazan prompts readers to consider what their own
responses would be in similar situations With an eye to ways of restructuring roles and relationships *Beyond Formulas in

students of linear algebra hit a wall at mid semester Having spent the first part of the term doing mostly computational work

they are unprepared for the rigors of conceptual thinking in an abstract setting that is frequently the focus of the second half of the course Holt's Linear Algebra with Applications blends computational and conceptual topics throughout Early treatment of conceptual topics in the context of Euclidean space gives students more time and a familiar setting in which to absorb them This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in most texts Abstract vector spaces are introduced later once students have developed a solid conceptual foundation Concepts and topics are frequently accompanied by applications to provide context and motivation Because many students learn by example Linear Algebra with Applications provides a large number of representative examples over and above those used to introduce topics The text also has over 2500 exercises covering computational and conceptual topics over a range of difficulty levels The Bulletin of the National Association of Secondary School Principals National Association of Secondary School Principals (U.S.),1961
