**What are Proteins and Their Composition**

Proteins are often called the "Building Blocks of Life" because they carry out so many essential functions in living organisms. They are large complex molecules that play critical roles in almost every biological process. Proteins are organic compounds made of the elements carbon (C), hydrogen (H), oxygen (O), nitrogen (N), and sometimes sulfur (S).

The building blocks (monomers) of proteins are amino acids. When many amino acids bond together, they form long chains called polypeptides, which then fold into specific shapes to become functional proteins.

Each amino acid has:

- A central carbon (C)
- A hydrogen atom (H)
- An amino group (-NH<sub>2</sub>)
- A carboxyl group (-COOH)
- An R group (side chain)

The R group (side chain) of the amino acid determines the amino acid's unique properties.
