Electrochemistry in Nonaqueous Solutions Kosuke Izutsu, 2009-09-22 An excellent resource for all graduate students and researchers using electrochemical techniques After introducing the reader to the fundamentals the book focuses on the latest developments in the techniques and applications in this field This second edition contains new material on environmentally friendly solvents such as room temperature ionic liquids **Well Completion Design** Jonathan Bellarby, 2009-04-13 Completions are the conduit between hydrocarbon reservoirs and surface facilities They are a fundamental part of any hydrocarbon field development project They have to be designed for safely maximising the hydrocarbon recovery from the well and may have to last for many years under ever changing conditions Issues include connection with the reservoir rock avoiding sand production selecting the correct interval pumps and other forms of artificial lift safety and integrity equipment selection and installation and future well interventions Course book based on course well completion design by TRACS International Unique in its field Coverage of offshore subsea and landbased completions in all of the major hydrocarbon basins of the world Full colour **High Resolution EPR** Graeme Hanson, Lawrence Berliner, 2009-06-19 Metalloproteins comprise approximately 30% of all known proteins and are involved in a variety of biologically important processes including oxygen transport biosynthesis electron transfer biodegradation drug metabolism proteolysis and hydrolysis of amides and esters environmental sulfur and nitrogen cycles and disease mechanisms EPR spectroscopy has an important role in not only the geometric structural characterization of the redox cofactors in metalloproteins but also their electronic structure as this is crucial for their reactivity The advent of x ray crystallographic snapshots of the active site redox cofactors in metalloenzymes in conjunction with high resolution EPR spectroscopy has provided detailed structural insights into their catalytic mechanisms This volume was conceived in 2005 at the Rocky Mountain Conference on Analytical Chemistry EPR Symposium to highlight the importance of high resolution EPR spectroscopy to the structural geometric and electronic characterization of redox active cofactors in metalloproteins We have been fortunate to have enlisted internationally recognized experts in this joint venture to provide the scientific community with an overview of high resolution EPR and its application to metals in biology This volume *High Resolution EPR Applications to Metalloenzymes and Metals in Medicine* covers high resolution EPR methods iron proteins nickel and copper enzymes and metals in medicine An eloquent synopsis of each chapter is provided by John Pilbrow in the Introduction A second volume *Metals in Biology Applications of High*

Resolution EPR to Metalloenzymes will appear later this year covering the complement of other metalloproteins One of the pioneers in the development of pulsed EPR and its application to metalloproteins was Arthur Schweiger whose contribution we include in this volume Unfortunately he passed away suddenly during the preparation of this volume The editors and coauthors are extremely honored to dedicate this volume to the memory of Arthur Schweiger in recognition of his technical advances and insights into pulsed EPR and its application to metalloproteins Arthur was extremely humble and treated everyone with equal respect He was a gifted educator with an ability to explain complex phenomena in terms of simple intuitive pictures had a delightful personality and continues to be sadly missed by the community It is an honor for the editors to facilitate the dissemination of these excellent contributions to the scientific community Suggestions for future volumes are always appreciated
