Scaffolds Avraam Ziogas, 2021-03-24 This book is about secondary degree equations or quadratic equations. It is based on an algorithmic method. The method is presented with empty boxes that need to be filled with numbers. The first two equations are fully solved as an example. Then the equations have gradually more and more blank spaces to be filled by the student. The blank spaces are here to help with the structure. Repetition is used to create a visual pattern that will be converted to a mental pattern. The existing numbers tend to serve as guidelines at the first equations and then they transform to checkpoints or pointers of different or difficult points. Gradually the equations become more challenging. Chapter 1 Equations are presented fully solved and then gradually more blank spaces are introduced. Chapter 2 Students can solve equations with coefficient a of the second degree term different than 1. Chapter 3 Equations without solutions are introduced. Chapter 4 Equations are repeated and the scaffold is getting more discreet. Chapter 5 Equations are repeated and the scaffold is disappearing leaving only the basic formulas in place. Chapter 6 This chapter has all the calculations needed for all the equations of the book. Additions, subtractions, multiplications, squares, and roots are listed here to be referenced if needed. Recommendation: Read the first fully solved equations with a critical eye. Color with colored markers the coefficients a , b , and c and track them in the solved equations. Students with special educational needs: Students should work on this material with the help of an assistant familiar with the material. Let the students find patterns in the first solved equations. Support them but also let them guess or speculate for the answers even if they are not sure. Goals: Learn to solve quadratic equations. Build confidence in the student's abilities. Overcome the psychological barrier of low performance. Give the students the opportunity to feel small successes. Who should use this book: Students homeschooling. Students who missed the related material at school. Students with special education needs supported by a qualified supporter. Teachers who want to differentiate their lessons structure. Teachers can use the book for revisions or as material for substitute teachers. Substitute teachers for short or longer periods of time. **1300 Math Formulas** Alex Svirin, 2020-11-20 1300 Math Formulas by alex svirin **Equations and Inequalities** Jiri Herman, Radan Kucera, Jaromir Simsa, 2000-03-23 A look at solving problems in three areas of classical elementary mathematics: equations and systems of equations of various kinds, algebraic inequalities, and elementary number theory in particular, divisibility and diophantine equations. In each topic, brief theoretical discussions are followed by carefully worked-out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems. While it emphasizes some methods that are not usually covered in beginning university courses, the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here. With

approximately 330 examples and 760 exercises
