**Astronomia Nova** James R. Voelkel, 2001-11-18 This is one of the most important studies in decades on Johannes Kepler among the towering figures in the history of astronomy Drawing extensively on Kepler's correspondence and manuscripts James Voelkel reveals that the strikingly unusual style of Kepler's magnum opus *Astronomia nova* 1609 has been traditionally misinterpreted Kepler laid forth the first two of his three laws of planetary motion in this work Instead of a straightforward presentation of his results however he led readers on a wild goose chase recounting the many errors and false starts he had experienced This had long been deemed a confessional mirror of the daunting technical obstacles Kepler faced As Voelkel amply demonstrates it is not Voelkel argues that Kepler's style can be understood only in the context of the circumstances in which the book was written Starting with Kepler's earliest writings he traces the development of the astronomer's ideas of how the planets were moved by a force from the sun and how this could be expressed mathematically And he shows how Kepler's once broader research program was diverted to a detailed examination of the motion of Mars Above all Voelkel shows that Kepler was well aware of the harsh reception his work would receive both from Tycho Brahe's heirs and from contemporary astronomers and how this led him to an avowedly rhetorical pseudo historical presentation of his results In treating Kepler at last as a figure in time and not as independent of it this work will be welcomed by historians of science astronomers and historians      **Poetria Nova of Geoffrey of Vinsauf** Geoffrey (of Vinsauf), 1967      **Handbuch der**
