Evolvable Hardware Tetsuya Higuchi, Xin Yao, 2006-11-02 Evolvable hardware EHW refers to hardware whose architecture structure and functions change dynamically and autonomously in order to improve its performance in carrying out tasks The emergence of this field has been profoundly influenced by the progress in reconfigurable hardware and evolutionary computation Traditional hardware can be inflexible the structure and its functions are often impossible to change once it is created However most real world problems are not fixed they change with time In order to deal with these problems efficiently and effectively different hardware structures are necessary EHW provides an ideal approach to make hardware soft by adapting the structure to a problem dynamically The contributions in this book provide the basics of reconfigurable devices so that readers will be fully prepared to understand what EHW is why it is necessary and how it is designed The book also discusses the leading research in digital analog and mechanical EHW

Wind Energy Systems John Dalsgaard Sørensen, Jens N Sørensen, 2010-12-20 Large scale wind power generation is one of the fastest developing sources of renewable energy and already makes a substantial contribution to power grids in many countries worldwide With technology maturing the challenge is now to increase penetration and optimise the design construction and performance of wind energy systems Fundamental issues of safety and reliability are paramount in this drive to increase capacity and efficiency Wind energy systems Optimising design and construction for safe and reliable operation provides a comprehensive review of the latest developments in the design construction and operation of large scale wind energy systems including in offshore and other problematic environments Part one provides detailed coverage of wind resource assessment and siting methods relevant to wind turbine and wind farm planning as well as aeroelastics aerodynamics and fatigue loading that affect the safety and reliability of wind energy systems This coverage is extended in part two where the design and development of individual components is considered in depth from wind turbine rotors to drive train and control systems and on to tower design and construction Part three explores operation and maintenance issues such as reliability and maintainability strategies and condition monitoring systems before discussing performance assessment and optimisation

routes for wind energy systems in low wind speed environments and cold climates Part four reviews offshore wind energy systems development from the impact of environmental loads such as wind waves and ice to site specific construction and integrated wind farm planning and of course the critical issues and strategies for offshore operation and maintenance With its distinguished editors and international teams of contributors Wind energy systems is a standard reference for wind power engineers technicians and manufacturers as well as researchers and academics involved in this expanding field Reviews the latest developments in the design construction and operation of large scale wind energy systems Offers detailed coverage of wind resource assessment and siting methods relevant to wind turbine and wind farm planning Explores operation and maintenance issues such as reliability and maintainability strategies and condition monitoring systems *Forthcoming Books* Rose Army,1999 The Elements of MATLAB Style Richard K.
