Binding And Kinetics For Molecular Biologists:

Binding and Kinetics for Molecular Biologists James Andrew Goodrich, Jennifer F. Kugel, 2007 This handbook offers a practical guide to the principles of quantitative analysis in biological experiments The material is primarily aimed at working molecular biologists but the scope and clarity of presentation make it equally suitable as an introduction for students Topics covered range from the basics such as measuring the concentrations of macromolecules through considerations of binding constants and the kinetics of molecular interactions The book ends with a thorough consideration of data analysis

Therapeutic Monoclonal Antibodies Zhiqiang An, 2011-09-20 70 chapter authoritative reference that covers therapeutic monoclonal antibody discovery development and clinical applications while incorporating principles experimental data and methodologies First book to address the discovery and development of antibody therapeutics in their entirety Most chapters contain experimental data to illustrate the principles described in them Authors provide detailed methodologies that readers can take away with them and use in their own laboratories

Emerging Model Organisms, 2009 Until recently a small number of model organisms has been the focus of most research in molecular cellular and developmental biology But in the last few years due in part to increased interest in questions of evolution technical advances in selectively altering gene expression patterns and reduced costs of genome sequencing the range of organisms used for research is greatly expanding Emerging Model Organisms Volume 1 introduces the reader to this new generation of model organisms providing a diverse catalog of potential species useful for extending research in new directions In this volume leading experts provide chapters on 23 emerging model systems ranging from bat and butterfly to cave fish and choanoflagellates cricket and finch to quail snail and tomato Subsequent releases of the Emerging Model Organisms series already in preparation will focus on additional species

Pratesi, 1996-08-31 The NATO Advanced Study Institute Biomedical Optical Instrumentation and Laser Assisted Biotechnology was held November 10 22 1995 in Erice Sicily This was the 19 th conference organized by the International School of Quantum Electronics under the auspices of the Ettore Majorana Center for Scientific Culture The contributions presented at the Institute are written as extended review like papers to provide a broad and representative coverage of the fields of laser techniques optoelectronics systems for medical diagnosis and light and laser applications to Biology and Medicine The aim of the Institute was to bring together some of the world s

acknowledged scientists and clinicians that belong to different disciplines and consequently do not usually meet but who have as a common link the use of optoelectronics instrumentation techniques and procedures Most of the lecturers attended all the lectures and devoted their spare hours to stimulating discussions We would like to thank them all for their admirable contributions The Institute also took advantage of a very active audience most of the participants were active researchers in the field and contributed with discussions and seminars Some of these seminars are also included in these Proceedings The Institute was an important opportunity to discuss latest developments and emerging perspectives on the use of laser sources and optoelectronic techniques for diagnostic and therapeutic purposes

Genetic Variation Michael P. Weiner, Stacey B. Gabriel, J. Claiborne Stephens, 2007 *Genetic Variation A Laboratory Manual* is the first compendium of protocols specifically geared towards genetic variation studies and includes thorough discussions on their applications for human and model organism studies Intended for graduate students and professional scientists in clinical and research settings it covers the complete spectrum of genetic variation from SNPs and microsatellites to more complex DNA alterations including copy number variation Written and edited by leading scientists in the field the early sections of the manual are devoted to study design and generating genotype data the use of resources such as HapMap and dbSNP as well as experimental statistical and bioinformatic approaches for analyzing the data The final sections include descriptions of genetic variation in model organisms and discussions of recent insights into human genetic ancestry forensics and human variation

Untangling the Double Helix James C. Wang, 2009 The problem of unraveling two intertwined strands during the duplication of DNA was recognized shortly after the proposal of the DNA double helix structure in 1953 A group of enzymes called DNA topoisomerases solves this problem by breaking and rejoining DNA molecules allowing strands to be passed through each other and thus be untangled and not just during DNA replication but during many other basic cellular processes as well The critical functions played by topoisomerases and their transient cleavage of intracellular DNA also account for their being the targets for many antibiotics including Cipro and anticancer agents
