- 1 Evolution is the process by which species change over generations. It leads to the emergence of new species through adaptation to the environment.
- 2 Charles Darwin formulated the theory of evolution. In 1859, he wrote "On the Origin of Species," which laid the foundation for this theory.
- 3 Natural selection means that the best-adapted individuals survive. These individuals pass on their genes.
- 4 Mutations are random changes in genetic material. They can produce new traits that influence evolution.
- 5 New species arise through long-term genetic changes. Geographical isolation can also play a role.
