MATHEMATICS DONG QIU,2024-12-30 Socio economic empirical analysis must borrow mathematical tools but only focusing on mathematics and ignoring the underlying reason of phenomena can easily lead to hypothetical analysis which formally meets the standards but loses the soul of quantitative research This book emphasizes the eternal mission of scholars in the process of empirical analysis which is to distinguish between mathematics and reason and to clarify the two entangled in phenomena The first part is a systematic monograph the second part is a reading note on the relationship between mathematics and reason the third part is the essay of one matter one reason and the fourth part is the author s early thinking on the relationship between mathematics and reason which still serves as a warning to this day As the fifth book of Criticism Series of Contemporary Economic Statistics it applies to the same audience as the first four books This book incorporates the author s insights and experiences from reading and traveling and may serve as a teaching reference for graduate and undergraduate students to enhance the flexibility of statistical learning Many people believe that economic statistics are only for quantitative analysis but upon closer examination the focus is on the degree of phenomena that is measurement

Temporal Patterns of Communication in Social Networks Giovanna Miritello,2013-04-23 The main interest of this research has been in understanding and characterizing large networks of human interactions as continuously changing objects In fact although many real social networks are dynamic networks whose elements and properties continuously change over time traditional approaches to social network analysis are essentially static thus neglecting all temporal aspects Specifically we have investigated the role that temporal patterns of human interaction play in three main fields of social network analysis and data mining characterization of time or attention allocation in social networks prediction of link decay persistence and information spreading In order to address this we analyzed large anonymized data sets of phone call communication traces over long periods of time Access to these observations was granted by Telefonica Research Spain The findings that emerge from our research indicate that the observed heterogeneities and correlations of human temporal patterns of interaction significantly affect the traditional view of social networks shifting from a very steady to a highly complex entity Since structure and dynamics are tightly coupled they cannot be disentangled in the analysis and modeling of human behavior though traditional models seek to do so Our results impact not only the way in which social network are traditionally characterized but more importantly also the understanding and modeling phenomena such as group formation spread of epidemics and the dissemination of ideas opinions and information
