Background: Cladistics is the study of evolutionary classification. A cladogram, or a branching tree, shows evolutionary relationships among organisms. Comparative morphology investigates characteristics for homology and analogy to determine which organisms share a recent common ancestor. A cladogram will begin by grouping organisms based on a characteristic displayed by ALL the members of the group. Subsequently, the larger group will contain increasingly smaller groups that share the traits of the groups before them. However, they also exhibit distinct changes as the new species evolve. Further, molecular evidence from genes which rarely mutate can provide molecular clocks that tell us how long ago organisms diverged, unlocking the secrets of organisms that may have similar convergent morphology but do not share a recent common ancestor.

Pre-Lab Questions:

Fig. 1 Sample Cladogram

1. Which organisms in the cladogram in figure 1 have fur and mammary glands?
2. Which organisms in the cladogram in figure 1 have jaws?
3. Based on the cladogram in figure 1, which shared a common ancestor most recently – a mouse and a lizard or a mouse and a perch?
4. Which two organisms would you expect to have a closer matching DNA sequence for a gene that doesn't matter in terms of natural selection – Hagfish and Pigeon or Hagfish and Salamander?
5. Using the species listed in Tables 1 and 2, hypothesize and list the species in order of evolutionary relationships beginning with Amoeba.

Dave A. Schoch, 2008-01-01 The modern theory of Evolution stands upon certain assumptions and has for over 150 years It will no doubt surprise many to discover that these assumptions are unwarranted and unjustified by the evidence and in some instances even antagonistic to the evidence therefore making them illegitimate This book describes these assumptions demonstrates why they are unwarranted and illegitimate and asks why they have not been dropped as the Scientific Method of research demands This work stands utilizing science alone without reference to religious books and allows the facts to speak for themselves

The Assumptions Behind the Theory of Evolution Dave A. Schoch, 2011 The foundation of evolutionary theory consists solidly of numerous unwarranted and illegitimate assumptions many of which are antagonistic to the facts of nature These assumptions are taught to the public as codified facts of science when they exist only as what if s The author addresses these issues as well as the philosophical roots of this scientific movement that push the theory along keeping it alive by less than scientific means He exposes the farce that a false philosophy not science keeps alive Most of the arguments for Intelligent Design are covered as well as many more ID doesn t cover The author also covers various games that evolutionary theorists like to play in their efforts to make evolutionary theory seem scientific He covers equivocation switching the meanings of words around to fit one s means to an end especially the four different meanings of the word evolution utilized by evolutionists to confuse the issue Before long anyone caught up into a debate with an evolutionist must concede because of these perfidious tactics According to one scientist this is an excellent book It promises to be a very important book in this area referring to the creation vs evolution
