*Enterprise Architecture at Work* Marc Lankhorst, 2005-10-11 An enterprise architecture tries to describe and control an organisation's structure processes applications systems and techniques in an integrated way The unambiguous specification and description of components and their relationships in such an architecture requires a coherent architecture modelling language Lankhorst and his co authors present such an enterprise modelling language that captures the complexity of architectural domains and their relations and allows the construction of integrated enterprise architecture models They provide architects with concrete instruments that improve their architectural practice As this is not enough they additionally present techniques and heuristics for communicating with all relevant stakeholders about these architectures Since an architecture model is useful not only for providing insight into the current or future situation but can also be used to evaluate the transition from as is to to be the authors also describe analysis methods for assessing both the qualitative impact of changes to an architecture and the quantitative aspects of architectures such as performance and cost issues The modelling language and the other techniques presented have been proven in practice in many real life case studies So this book is an ideal companion for enterprise IT or business architects in industry as well as for computer or management science students studying the field of enterprise architecture

Viewpoint-based Flexible Information System Architectures Dmitri Valeri Panfilenko,2021-06-07 Information system architecture ISA specification as a part of software engineering field has been an information systems research topic since the 60 s of the 20th century There have been manifold specification methodologies over the recent decades developed newly or adapted in order to target the domains of software modelling legacy systems steel production and automotive safety Still there exist considerable issues constituting the need for a flexible ISA development e g incomplete methodology for requirements in model driven architectures lacking qualitative methods for thorough definition and usage of viewpoints Currently existing methods for information system architecture specification usually de vise the target architectures either addressing only a part of software life cycles or neglect ing less structured information The method for flexible information system architectures FISA specification uses the viewpoint concept for mediating the domain expert and technical system levels The FISA method defines construction and application reference models based on the ANSI IEEE Standard 1471 2000 viewpoints with model transfor mations based on OMG Standard Model Driven Architecture MDA and four different approaches for ISA specification thus providing for flexibility both in construction and refactoring procedures The development of FISA method has been based on a thorough analysis of the ISA specification method field and constructs a comprehensive procedure and reference engi neering models for flexible ISA specification The genericity of the conceived construction and application procedure models of FISA allows for its usage not only in research but also in industry settings as presented on illustrative scenarios in steel manufacturing and automotive safety
