Exploring Language Pedagogy through Second Language Acquisition
Research Rod Ellis, Natsuko Shintani, 2013-07-31 Routledge. *Introductions to Applied Linguistics* is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those beginning postgraduate studies or taking an introductory MA course as well as advanced undergraduates. Titles in the series are also ideal for language professionals returning to academic study. The books take an innovative practice-to-theory approach with a back-to-front structure. This leads the reader from real world problems and issues through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Additional features include a glossary of key terms and discussion questions. Following the back-to-front approach of the series, the book takes problematic issues in language pedagogy as its starting points. These are then examined in terms of second language acquisition. Each chapter begins with a look at the pedagogical proposals found in teacher guides and then asks: Do these proposals accord with what we know about how languages are acquired? Pedagogical topics covered include teaching methods, syllabus design, explicit instruction, comprehension versus production based instruction, task based instruction, authentic materials, the role of the learners' first language in the classroom, error correction, and catering for individual differences. Including a glossary of key terms and questions for discussion at the end of each chapter and assuming no prior knowledge of second language acquisition, this is the ideal text for all students studying language teaching methods, language teacher education, English teaching methodology, and second language acquisition modules in advanced undergraduate and postgraduate graduate TESOL and Applied Linguistics courses.

It is the first comprehensive presentation of Logo's highly developed, well-publicized but vastly underused language manipulation capability. Throughout the book, experimental projects and compelling examples of language in use are chosen to stimulate interest in and promote exploration of the structure, function, and history of language. The treatment is both serious and playful. Using this book, readers can teach a machine how to produce words, phrases, and sentences, and at the same time gain insight into both the elegance and the complexity of language. The book teaches Logo technique as it is needed for specific explorations, with the goal of providing readers with enough programming independence to design their own sophisticated

language manipulation programs The first part takes up the grammar of sentences poems and stories syntax semantics and style the orderliness of language in units larger than a word The second explores the structure in the microscopic worlds within words morphology orthography and phonology The reader is invited to model the structure of words create procedures that know how to spell discover the ways words are affected when affixes are added and to work with projects on word roots historical changes in words and conjugations and declensions in English and other languages This inventive and innovative text is readable both with and without the computer It will challenge and excite anyone interested in learning or teaching language and linguistics E Paul Goldenberg is Researcher and Developer at Education Development Center Inc Newton adjunct faculty in education at Lesley College and former Director of the Computer Center at Lincoln Sudbury Regional High School Wallace Feurzeig is Division Scientist of the Information Sciences Division at BBN Laboratories Cambridge Exploring Language with Logo is included in the series Explorations in Logo edited by E Paul Goldenberg
