Be Engineering Chemistry Notes 2016:

Coding Literacy Annette Vee, 2017-07-28 How the theoretical tools of literacy help us understand programming in its historical social and conceptual contexts The message from educators the tech community and even politicians is clear everyone should learn to code To emphasize the universality and importance of computer programming promoters of coding for everyone often invoke the concept of literacy drawing parallels between reading and writing code and reading and writing text In this book Annette Vee examines the coding as literacy analogy and argues that it can be an apt rhetorical frame The theoretical tools of literacy help us understand programming beyond a technical level and in its historical social and conceptual contexts Viewing programming from the perspective of literacy and literacy from the perspective of programming she argues shifts our understandings of both Computer programming becomes part of an array of communication skills important in everyday life and literacy augmented by programming becomes more capacious Vee examines the ways that programming is linked with literacy in coding literacy campaigns considering the ideologies that accompany this coupling and she looks at how both writing and programming encode and distribute information She explores historical parallels between writing and programming using the evolution of mass textual literacy to shed light on the trajectory of code from military and government infrastructure to large scale businesses to personal use Writing and coding were institutionalized domesticated and then established as a basis for literacy Just as societies demonstrated a literate mentality regardless of the literate status of individuals Vee argues a computational mentality is now emerging even though coding is still a specialized skill

A Field on Fire Mark D. Hersey, Ted Steinberg, 2019-01-29 A frank and engaging exploration of the burgeoning academic field of environmental history Inspired by the pioneering work of preeminent environmental historian Donald Worster the contributors to *A Field on Fire: The Future of Environmental History* reflect on the past and future of this discipline Featuring wide ranging essays by leading environmental historians from the United States Europe and China the collection challenges scholars to rethink some of their orthodoxies inviting them to approach familiar stories from new angles

to integrate new methodologies and to think creatively about the questions this field is well positioned to answer Worster's groundbreaking research serves as the organizational framework for the collection Editors Mark D Hersey and Ted Steinberg have arranged the book into three sections corresponding to the primary concerns of Worster's influential scholarship the problem of natural limits the transnational nature of environmental issues and the question of method Under the heading Facing Limits five essays explore the inherent tensions between democracy technology capitalism and the environment The Crossing Borders section underscores the ways in which environmental history moves easily across national and disciplinary boundaries Finally Doing Environmental History invokes Worster's work as an essayist by offering self-conscious reflections about the practice and purpose of environmental history The essays aim to provoke a discussion on the future of the field pointing to untapped and underdeveloped avenues ripe for further exploration A forward thinker like Worster presents bold challenges to a new generation of environmental historians on everything from capitalism and the Anthropocene to war and wilderness This engaging volume includes a very special afterword by one of Worster's oldest friends the eminent intellectual historian Daniel Rodgers who has known Worster for close to fifty years
