International Contracting: Contract Management In Complex Construction Projects

Arjan Van Weele, John Van Der Puil, 2013-10-25. This book about international contracting and contract management is written from the angle of the contractor and discussed from an international perspective. It comments on real-life cases taken from various kinds of projects: infrastructural works, roads, bridges, tunnels, railroads, wind and sunfarms, oil and gas installations such as platforms, pipe lines, power generating works, and large buildings. The book is structured around the contracting cycle. Chapters include dealing with the role of the contractor in international contracting, the tender process, landing and negotiating the contract, types of contract problems that may occur during project execution, project delivery and handling guarantee claims. Written primarily for business practitioners operating in the international contracting industry, the title assumes that the reader will have a basic understanding and knowledge of theories related to project management, construction engineering, business law, and economics. Though not an academic book due to its unique blend of practitioners' insight and academic theory, it can be taught on Masters courses. As most engineers are going to deal with contracts, this book is specifically recommended for engineering programs at both graduate and postgraduate levels. Lawyers will find the book useful in helping them to understand the business context in which their customers and/or colleagues work.
