[Physics Of Reality, The: Space, Time, Matter, Cosmos - Proceedings Of The 8th Symposium Honoring Mathematical Physicist Jean-pierre Vigié](#) Richard L Amoroso, Louis H Kauffman, Peter Rowlands, 2013-09-18 A truly Galilean class volume this book introduces a new method in theory formation completing the tools of epistemology It covers a broad spectrum of theoretical and mathematical physics by researchers from over 20 nations from four continents Like Vigié himself the Vigié symposia are noted for addressing avant garde cutting edge topics in contemporary physics Among the six proceedings honoring J P Vigié

this is perhaps the most exciting one as several important breakthroughs are introduced for the first time The most interesting breakthrough in view of the recent NIST experimental violations of QED is a continuation of the pioneering work by Vigier on tight bound states in hydrogen The new experimental protocol described not only promises empirical proof of large scale extra dimensions in conjunction with avenues for testing string theory but also implies the birth of the field of unified field mechanics ushering in a new age of discovery Work on quantum computing redefines the qubit in a manner that the uncertainty principle may be routinely violated Other breakthroughs occur in the utility of quaternion algebra in extending our understanding of the nature of the fermionic singularity or point particle There are several other discoveries of equal magnitude making this volume a must have acquisition for the library of any serious forward looking researchers

Relativity Robert Bartnik,1989 Classical General Relativity Subrahmanyan Chandrasekhar,1993 Because of the
 vicissitudes of history the general theory of relativity has never been consistently explored to ascertain whether in its realm
 of exact validity it predicts phenomena which have no counterparts in the Newtonian limit that is in the limit in which the
 velocity of light may be considered infinite Thus while recent interest in physics has concentrated on such frontier areas as
 quantum gravity and cosmology there has also been a quiet but steady progress in the classical domain The five papers
 collected in this volume and presented under the editorship of the famed Nobel Laureate S Chandrasekhar illustrate the
 nature of these advances Each of them represents developments in areas both of physics and mathematics which disclose
 unanticipated findings that illustrate the special character of work in these areas Astrophysicists and mathematical relativists
