Signal Processing for Neuroscientists Wim van Drongelen, 2006-12-18 Signal Processing for Neuroscientists introduces analysis techniques primarily aimed at neuroscientists and biomedical engineering students with a reasonable but modest background in mathematics physics and computer programming The focus of this text is on what can be considered the golden trio in the signal processing field averaging Fourier analysis and filtering Techniques such as convolution correlation coherence and wavelet analysis are considered in the context of time and frequency domain analysis The whole spectrum of signal analysis is covered ranging from data acquisition to data processing and from the mathematical background of the analysis to the practical application of processing algorithms Overall the approach to the mathematics is informal with a focus on basic understanding of the methods and their interrelationships rather than detailed proofs or derivations One of the principle goals is to provide the reader with the background required to understand the principles of commercially available analyses software and to allow him her to construct his her own analysis tools in an environment such as MATLAB Multiple color illustrations are integrated in the text Includes an introduction to biomedical signals noise characteristics and recording techniques Basics and background for more advanced topics can be found in extensive notes and appendices A Companion Website hosts the MATLAB scripts and several data files <http://www.elsevierdirect.com/companion.jsp> ISBN 9780123708670

Signal Processing for Neuroscientists Wim van Drongelen, 2018-04-20 Signal Processing for Neuroscientists Second Edition provides an introduction to signal processing and modeling for those with a modest understanding of algebra trigonometry and calculus With a robust modeling component this book describes modeling from the fundamental level of differential equations all the way up to practical applications in neuronal modeling It features nine new chapters and an exercise section developed by the author Since the modeling of systems and signal analysis are closely related integrated presentation of these topics using identical or similar mathematics presents a didactic advantage and a significant resource for neuroscientists with quantitative interest Although each of the topics introduced could fill several volumes this book provides a fundamental and uncluttered background for the non specialist scientist or engineer to not only get applications started but also evaluate more advanced literature on signal processing and modeling Includes an introduction to biomedical signals noise characteristics recording techniques and the more advanced topics of linear nonlinear and multi channel systems analysis Features new chapters on the fundamentals of modeling application to neuronal modeling Kalman filter multi taper power spectrum estimation and practice exercises Contains the basics and background for more advanced topics in extensive notes and appendices Includes practical examples of algorithm development and implementation in MATLAB Features a companion website with MATLAB scripts data files figures and video lectures

Signal Processing for Neuroscientists, A Companion Volume Wim van Drongelen, 2010-09-10 The popularity of signal processing in neuroscience is increasing and with the current availability and development of computer hardware and software it is anticipated that the current growth will continue Because electrode fabrication has improved and measurement equipment is getting less expensive electrophysiological measurements with large numbers of channels are now very common In addition neuroscience has entered the age of light and fluorescence measurements are fully integrated into the researcher s toolkit Because each image in a movie contains multiple pixels these measurements are multi channel by nature Furthermore the availability of both generic and specialized software packages for data analysis has altered the neuroscientist s attitude toward some of the more complex analysis techniques This book is a companion to the previously published *Signal Processing for Neuroscientists: An Introduction to the Analysis of Physiological Signals* which introduced readers to the basic concepts It discusses several advanced techniques rediscovers methods to describe nonlinear systems and examines the analysis of multi channel recordings Covers the more advanced topics of linear and nonlinear systems analysis and multi channel analysis Includes practical examples implemented in MATLAB Provides multiple references to the basics to help the student
