Electricity in Buildings Chartered Institution of Building Services Engineers, 2004 *Building Services Design for Energy Efficient Buildings* Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings. However, textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating, ventilation, and air conditioning (HVAC) systems, often with little wider context. This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change, together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner. The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail. These are HVAC and electrical systems. In addition, the following issues are addressed: background issues on climate change, whole life performance, and design collaboration; generic strategies for energy efficient, low carbon design; health and wellbeing; and post-occupancy evaluation. Building ventilation, air conditioning, and HVAC system selection; thermal energy generation and distribution systems; low energy approaches for thermal control; electrical systems; data collection; controls and monitoring; building thermal load assessment; building electric power load assessment; space planning and design integration with other disciplines. In order to deliver buildings that help mitigate climate change impacts, a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines. This book provides a contemporary introduction and guide to this new approach for students and practitioners alike.

Heating Services in Buildings David E. Watkins, 2011-09-26 Water based heating systems are efficient, flexible, versatile, and offer many advantages over other heating systems. These advantages: fast response, good controllability, efficient zonal heating, and largely silent operation, all require that initial design, installation, commissioning, and maintenance be carried out to a high standard by competent engineers. *Heating Services in Buildings* provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems. A key theme of the book is that there is little difference in the approach to the design and engineering between domestic and commercial installations. The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material. This approach is complemented by straightforward, easy-to-use diagrams. *Heating Services in Buildings* supports a range of educational courses, including degree level building services engineering, NVQ Level 4 Higher Professional Diploma in Building Services Engineering, City Guilds supplementary heating course, and the Heating Design and Installation Course accredited by the European Registration Scheme (ERS).
