Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, Robert V. O'Neill, 2007-05-08 An ideal text for students taking a course in landscape ecology The book has been written by very well known practitioners and pioneers in the new field of ecological analysis Landscape ecology has emerged during the past two decades as a new and exciting level of ecological study Environmental problems such as global climate change land use change habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery geographic information systems and desk top computing has permitted the development of spatially explicit analyses In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student Throughout the theoretical developments modeling approaches and results and empirical data are merged together so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes as well as identifying areas where its contributions have been limited Each chapter features questions for discussion as well as recommended reading

Multi-Fractal Traffic and Anomaly Detection in Computer Communications Ming Li, 2022-12-29 This book provides a comprehensive theory of mono and multi fractal traffic including the basics of long range dependent time series and $1/f$ noise ergodicity and predictability of traffic traffic modeling and simulation stationarity tests of traffic traffic measurement and the anomaly detection of traffic in communications networks Proving that mono fractal LRD time series is ergodic the book exhibits that LRD traffic is stationary The author shows that the stationarity of multi fractal traffic relies on observation time scales and proposes multi fractional generalized Cauchy processes and modified multi fractional Gaussian noise The book also establishes a set of guidelines for determining the record length of traffic in measurement Moreover it presents an approach of traffic simulation as well as the anomaly detection of traffic under distributed denial of service attacks Scholars and graduates studying network traffic in computer science will find the book beneficial
