**Real-World Java** Victor Grazi, Jeanne Boyarsky, 2025-01-14 A concise handbook for the most common tools used in modern Java development. Good Java developers learn Java syntax, how to create loops and switches, and can work out a lambda filter stream. But great Java developers need to understand the vast ecosystem of tools and frameworks for collaboration, testing, building, and more. In *Real World Java: Helping You Navigate the Java Ecosystem*, a team of veteran Java developers delivers a concise and authoritative discussion of the most common frameworks, tools, and techniques used in enterprise Java development shops. The authors provide just enough background and examples to allow you to dive right into the expert guidance on annotations, logging, frameworks, observability, performance tuning, testing tools, and collaboration that real life commercial Java development typically relies on. You'll expand your Java development toolkit with frameworks and utilities like Spring, Git, Prometheus, and Project Lombok. You'll also discover links to tested, downloadable code examples that demonstrate the skills discussed in the book. *Real World Java* is the perfect resource for everyone already somewhat comfortable with the language but who wants to familiarize themselves with the tools and frameworks used in contemporary Java software development.

**The Agile Imperative** Sabine Pfeiffer, Manuel Nicklich, Stefan Sauer, 2021-07-30 In an ever-changing working environment, customer and workplace demands have brought new challenges to how we organize and manage work. Increasingly, this is addressed by the idea of agility. From its beginning, agile work has claimed to be a radically different approach which allows organizations to react flexibly to changing environmental demands whilst also offering a people-centered approach to management. While the literature often examines agile instruments from a business perspective, this edited collection advances the discussion of the efficacy of agile working by applying a more critical social science perspective. The chapters scrutinize whether agility is just a discursive imperative or whether it is in fact a genuine organizational and institutional strategy that is meant to better deal with complexity and volatility. The answers to these

questions can vary at different levels and the editors therefore examine agility at the level of teams organizations and societies By assembling different perspectives on the sustainability and virtue of agile instruments and by bringing together international scholars from a variety of disciplines the project stimulates a comparative discussion

Roberts, 2008 The last half century has seen many studies of the origin of the English village As a cross disciplinary enquiry this book integrates materials from geography history economic history archaeology place name studies anthropology and even church architecture These provide varied foundations but the underlying subject matter always engages with landscape studies Beginning with a rigorous examination of evidence hidden within the surviving village and hamlet plans seen on eighteenth and nineteenth century maps the first half of the book shows how these can be classified mapped analysed and then interpreted as important parts of former medieval landscapes Many specific case studies are built into the argument all being drawn from the author's lifetime work on northern England and accessible language is employed From this base the argument develops with the objective of integrating landscape studies with the descriptive and analytical practices of history and drawing these together by using the cartographic methods of historical geography This foundation leads gently into deeper waters to the landed estates in which all settlements developed and the farming and social systems of which they were a part to the land holding arrangements that were integrated into the physical plans providing methods of sharing out the agricultural resources of arable meadow woodland and common grazings and finally to the social divisions present within a changing society A wholly new theme is found in the argument that certain types of land tenure were associated with a class of officer land agent or dreng who in northern England was often linked with the provision of tenants for new villages It is clear from the evidence amassed that the deliberate founding of new villages and the establishment of new plans on older sites was taking place in the centuries between about AD 900 and 1250 Finally the study moves beyond the North of England to review the European roots of planned villages and hamlets and concludes with a challenging

hypothesis about their origin in the whole of England This provides pointers towards future enquiry      **Documentation**
