*Finding Einstein's Brain* Frederick E. Lepore, 2018-06-25 Albert Einstein remains the quintessential icon of modern genius Like Newton and many others his seminal work in physics includes the General Theory of Relativity the Absolute Nature of Light and perhaps the most famous equation of all time  $E=mc^2$  Following his death in

1955 Einstein's brain was removed and preserved but has never been fully or systematically studied. In fact, the sections are not even all in one place and some are mysteriously unaccounted for. In this compelling tale, Frederick E. Lepore delves into the strange, elusive afterlife of Einstein's brain, the controversy surrounding its use, and what its study represents for brain and/or intelligence studies. Carefully reacting to the skepticism of 21st-century neuroscience, Lepore more broadly examines the philosophical, medical, and scientific implications of brain examination. Is the brain simply a computer? If so, how close are we to artificially creating a human brain? Could scientists create a second Einstein? This biography of a brain attempts to answer these questions, exploring what made Einstein's brain anatomy exceptional and how found photographs discovered more than a half a century after his death may begin to uncover the nature of genius. Autobiographical Notes Albert Einstein, 1979. Written with clarity, humanity, and grace, this essay is the only autobiography that Einstein has left to us. Not so much a memoir as an account of his intellectual development, it moves from his youthful interest in geometry to the influence of the work of such fellow scientists as Maxwell, Mach, and Bohr on the growth of his own theories. First published as an element of the Library of Living Philosophers volume *Albert Einstein: Philosopher-Scientist*, the essay is here presented in both the original German and a revised English translation to celebrate the hundredth anniversary of Einstein's birth.

**Materialism and Dialectics in a Post-classical World** Anil Rajimwale, 2021-11-04. Evolution of the concepts of atom and atomism and the impact of electromagnetism on our worldview is the object of our study in this book. Electromagnetism is the key link in the transition from classical to post-classical worldview. This transition is caused by the one from our thought based upon the tangibles to that based upon the intangibles. Electromagnetism inaugurated an era of light speeds and near it, and of the world constituted by such speeds. Philosophy and the worldview need to catch up and undergo a basic change. Atom as a concept and reality is under severe stress as explanation of reality. Reality has come out of atomic limits and unveiled a new world which is constituted of quantum relativity, wave-particle duality, etc. It is a challenge to philosophy which is re-fashioning to interpret the post-classical world based on rapid motions. We need to develop new concepts and bring about a realignment in various thought constituents. Rather than overthrow matter, we are delving deeper into it. Philosophy and human thought itself stands on the brink of redefinition. In the present book, the author shows how electromagnetism connects classical with post-classical thought, creating new structures and impacting materialism and dialectics. This book is co-published with Aakar Books, New Delhi. Taylor & Francis does not sell or distribute the print versions of this book in India, Pakistan, Nepal, Bhutan, Bangladesh, and Sri Lanka.
