[Generative AI Handbook](#) Marc Rolland, 2026-02-02 What if the generative AI systems reshaping enterprise decision making rest on theoretical foundations that computer scientists themselves have never fully agreed upon Most technical handbooks treat large language models as inevitable technologies awaiting routine optimization This volume confronts a more complex reality generative AI arrives as an unresolved intellectual inheritance decades of argument between symbolic reasoning and statistical induction compressed into production pipelines Foundation models demonstrate competence without comprehension absorb historical contradictions without adjudication and optimize for fluency while remaining indifferent to truth They are neither neutral tools nor autonomous agents but artifacts of accumulated human language filtered through objectives that care nothing for coherence unless explicitly constrained You will find no simplified tutorials promising effortless implementation Instead you encounter the architectural tensions practitioners prefer to ignore whether attention mechanisms constitute genuine interpretability or mere optimization convenience when fine tuning crosses from adaptation into epistemological distortion how retrieval augmented generation reintroduces the very brittleness that end to end learning sought to eliminate Examine why transformer architectures internalize competing ideological frames and linguistic norms without mechanism for resolving their inherent contradictions Confront the unresolved epistemological cost of reframing language from formal rule

systems to probabilistic distributions Navigate the scholarly schism over whether foundation models represent compressed cultural memory or alien artifacts lacking normative commitment Architect enterprise pipelines while acknowledging that safety constraints oscillate between prudent caution and problematic overreach Evaluate deployment strategies when empirical evidence shows attention weights frequently fail to track genuine causal influence Question whose epistemic authority speaks when models generate answers the optimizer the dataset or an emergent statistical consensus belonging to no tradition For senior architects and technical leaders prepared to own the conceptual debts embedded in their systems rather than obscure them behind abstraction layers Build enterprise AI responsibly begin by interrogating what remains fundamentally contested
