Relevant Query Answering over Streaming and Distributed Data Shima Zahmatkesh, Emanuele Della Valle, 2020-01-21

This book examines the problem of relevant query answering over the Web and provides a comprehensive overview of relevant query answering over streaming and distributed data. In recent years Web applications that combine highly dynamic data streams with data distributed over the Web to provide relevant answers have attracted increasing attention. Answering in a timely fashion i.e. reactively is one of the most important performance indicators especially when the distributed data is evolving. The book proposes a solution that retains a local replica of the distributed data and offers various maintenance policies to refresh the replica over time. A limited refresh budget guarantees the reactivity of the system. Focusing on stream processing and Semantic Web it appeals to scientists and graduate students in the field.

Emerging Trends in Computing and Expert Technology D. Jude Hemanth, V. D. Ambeth Kumar, S. Malathi, Oscar Castillo, Bogdan

Patrut, 2019-11-07 This book presents high quality research papers that demonstrate how emerging technologies in the field of intelligent systems can be used to effectively meet global needs. The respective papers highlight a wealth of innovations and experimental results while also addressing proven IT governance standards and practices and new designs and tools that facilitate rapid information flows to the user. The book is divided into five major sections namely Advances in High Performance Computing, Advances in Machine and Deep Learning, Advances in Networking and Communication, Advances in Circuits and Systems in Computing, and Advances in Control and Soft Computing.

High Performance Embedded Architectures and Compilers Tom Conte, Nacho Navarro, Wen-mei W. Hwu, Mateo Valero, Theo Ungerer, 2005-11-04

As Chairmen of HiPEAC 2005 we have the pleasure of welcoming you to the proceedings of the first international conference promoted by the HiPEAC Network of Excellence. During the last year HiPEAC has been building its clusters of researchers in computer architecture and advanced compiler techniques for embedded and high performance computers. Recently the Summer School has been the seed for a fruitful collaboration of renowned international faculty and young researchers from 23 countries with fresh new ideas. Now the conference promises to be among the premier forums for discussion and debate on these research topics. The prestige of a symposium is mainly determined by the quality of its technical program. This first program lived up to our high expectations thanks to the large number of strong submissions. The Program Committee received a total of 84 submissions, only 17 were selected for presentation as full length papers and another one as an invited paper. Each paper was rigorously reviewed by three Program Committee members and at least one external referee. Many reviewers spent a great amount of effort to provide detailed feedback. In many cases such feedback along with constructive shepherding resulted in dramatic improvement in the quality of accepted papers. The names of the Program Committee members and the referees are listed in the proceedings. The net result of this team effort is that the symposium proceedings include outstanding contributions by authors from nine countries in three continents. In addition to paper presentations this first HiPEAC
