1668 Vincent Aherne, 2020-03-30 **Relationships for Smoke Control Calculations**, 1995 These Technical Memoranda have been prepared in order to provide engineering relationships which can be used as part of the overall fire safety design of buildings with atria and other spaces where large numbers of people may be exposed to smoke toxic atmospheres and hot gases The need for smoke control depends on many aspects of the building design and use including the combustibility of the contents mobility of occupants and ease of escape The smoke control measures needed if any may be simple perhaps exploiting the normal ventilation system or they may require extra equipment and controls These considerations are taken in context in fire safety engineering design and are dealt with elsewhere | This publication is intended as a source document for design guidance The relationships are based on published authoritative information where this is available and the limits of applicability are suggested In cases where the basis of a relationship is not firmly established the relationship is given on the understanding that it may be superseded when further information is available This is made clear in the text It should normally be possible to use the information given here without resort to computational fluid dynamics CFD or physical modelling although these are valuable tools which can be used for unusual designs or to generate future design guidance The basic principles involved in CFD and what is offered to the designer are described in Appendix 2 Background notes and sources for these Memoranda are given in Appendix 3 However information on smoke generation and smoke control is increasing rapidly and new data can be used to augment the guidance given here Smoke Control in Buildings: Strategies, Systems, and Solutions Charles Nehme, Smoke control in buildings is an essential aspect of modern fire safety engineering playing a critical role in protecting lives preserving property and ensuring the continuity of operations during fire incidents The complexity and significance of effectively managing smoke movement within various building types demand a comprehensive understanding of both fundamental principles and advanced technologies The genesis of this book lies in the increasing recognition of the challenges posed by smoke during fires not only to the occupants but also to the firefighters and emergency responders Smoke often the leading cause of fatalities in fires can obscure visibility impede evacuation and cause significant health hazards due to its toxic components As such it is imperative for engineers architects designers and safety professionals to be equipped with the knowledge and tools necessary to design implement and maintain effective smoke control systems Smoke Control in Buildings Strategies Systems and Solutions is meticulously crafted to bridge the gap between academic theory and practical application This book aims to serve as a comprehensive guide offering insights into the physics of smoke the design and implementation of various smoke control systems and the integration of these systems within the broader context of building design and fire safety strategies In the initial chapters we delve into the foundational principles of smoke behavior and movement providing readers with a solid grounding in the subject This is followed by an exploration of the different types of smoke control systems passive active and hybrid highlighting their respective advantages limitations and applications We also discuss the crucial aspects of designing these systems taking into account performance

objectives regulatory requirements and the intricacies of system integration Advanced computational tools and methods form a significant part of modern smoke control strategies Therefore a dedicated chapter is provided to familiarize readers with the latest fire and smoke modeling software complemented by real world case studies that illustrate the practical application of these tools Furthermore we address the importance of proper installation commissioning and ongoing maintenance to ensure the reliability and effectiveness of smoke control systems throughout their lifecycle The inclusion of diverse case studies offers a pragmatic view of smoke control challenges and solutions across different building types from high rise structures to underground spaces and public assembly venues These examples serve to contextualize theoretical knowledge providing readers with valuable lessons drawn from real world scenarios Looking ahead we explore emerging trends and technological innovations that are shaping the future of smoke control The integration of smart building technologies and the evolving landscape of standards and regulations are examined to prepare readers for upcoming developments in the field This book is the result of extensive research and collaboration with experts in fire safety engineering architecture and building services It is intended to be a valuable resource for professionals and students alike offering both a thorough understanding of smoke control principles and practical guidance for their application We hope that Smoke Control in Buildings Strategies Systems and Solutions will inspire and equip you to enhance fire safety in buildings ultimately contributing to the protection of life and property in our built environment

Design Manual for Smoke Control Systems
John H. Klote, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Building and Fire Research Laboratory (U.S.), 1991 This manual consolidates and systematically presents data and calculational procedures for use by smoke control system designers and design criteria is discussed Fundamental issues of smoke control include reliability activation smoke obscuration toxicity and the driving forces of smoke movement The mechanisms of compartmentation dilution air flow pressurization and buoyancy are used by themselves or in combination to manage smoke conditions in fire situations A computer program for analysis of smoke control systems is presented Systems for stairwell pressurization elevator smoke control and zoned smoke control are presented Numerous example calculations are included
