Computational Economics David A. Kendrick, P. Ruben Mercado, Hans M. Amman, 2011-10-23 The ability to conceptualize an economic problem verbally to formulate it as a mathematical model and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists Computational Economics contains well known models and some brand new ones designed to help students move from verbal to mathematical to computational representations in economic modeling The authors focus however is not just on solving the models but also on developing the ability to modify them to reflect one's interest and point of view The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times Unlike other computational economics textbooks this book is organized around economic topics among them macroeconomics microeconomics and finance The authors employ various software systems including MATLAB Mathematica GAMS the nonlinear programming solver in Excel and the database systems in Access to enable students to use the most advantageous system The book progresses from relatively simple models to more complex ones and includes appendices on the ins and outs of running each program The book is intended for use by advanced undergraduates and professional economists and even as a first exposure to computational economics by graduate students Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous software systems Encourages customization and creativity

Rethinking Income and Money Geoff Crocker, 2025-05-16 This Palgrave Pivot is immensely relevant to current policy debates on poverty welfare policy monetary policy and the impact of automation Geoff Crocker offers a radical re interpretation of economic theory specifically of income money and technology The book explores alternative economic paradigms focusing on the urgent need to get adequate income to all households whilst reducing national debt Technology is essential for the understanding of economic outcomes since consumption production employment distribution and transactions all shift radically with technological change Major policy proposals include hybrid welfare schemes with reduced conditionality an element of universal income and a proposal for direct money financing of government expenditure all

without stoking inflation This book will appeal to economists policy analysts economic journalists and others who are interested in radical restructuring of the economy *Optimal Redistributive Taxation* Matti Tuomala,2016-01-21 Tax systems raise large amounts of revenue for funding public sector s activities and tax transfer policy together with public provision of education health care and social services play a crucial role in treating the symptoms and the causes of poverty The normative analysis is crucial for tax transfer design because it makes it possible to assess separately how changes in the redistributive criterion of the government and changes in the size of the behavioural responses to taxes and transfers affect the optimal tax transfer system Optimal tax theory provides a way of thinking rigorously about these trade offs Written primarily for graduate students and researchers this volume is intended as a textbook and research monograph connecting optimal tax theory to tax policy It comments on some policy recommendations of the Mirrlees Review and builds on the authors work on public economics optimal tax theory behavioural public economics and income inequality The book explains in depth the Mirrlees model and presents various extensions of it The first set of extensions considers changing the preferences for consumption and work behavioural economic modifications such as positional externalities prospect theory paternalism myopic behaviour and habit formation but also heterogeneous work preferences besides differences in earnings ability The second set of modifications concerns the objective of the government The book explains the differences in optimal redistributive tax systems when governments instead of maximising social welfare minimise poverty or maximise social welfare based on rank order or charitable conservatism social welfare functions The third set of extensions considers extending the Mirrlees income tax framework to allow for differential commodity taxes capital income taxation public goods provision public provision of private goods and taxation commodities that generate externalities The fourth set of extensions considers incorporating a number of important real word extensions such as tagging of tax schedules to certain groups of tax payers In all extensions the book illustrates the main mechanisms using advanced numerical simulations *Swedish Economic Thought* Lars Jonung,2006-05-18 The impact of Swedish economists on the development of modern economic analysis has been profound This volume contains twelve essays dealing with various aspects of the development of economics and economic thought from the mid 18th century to the middle of the 20th century Most of the essays cover the golden age of Swedish economics the early decades of the 20th century and deal with such figures as Knut Wicksell Gustav Cassel Eli Heckscher Bertil Ohlin Erik Lindahl and Erik Lundberg The book includes a chapter on an unpublished manuscript of Knut Wicksell s which is reproduced in English for the first time *The British National Bibliography* Arthur James Wells,2001 Forthcoming Books Rose Army,1999 **Economic Stories For Undergrads** Annavajhula J. C. Bose,2022-05-10 Economics is the strangest and most dubious as also frustrating animal of social sciences and humanities The debate on what it is and what its strengths and weaknesses are in understanding and changing the economy and society for the better is never ending This book cuts through this noise for econ undergrads with social concerns It is crafted to be stuffed with

peripatetic hops skips and intellectual and emotional jumps about the nature and character of the brain circuits of economics in terms of its methodological political sociological anthropological historical feminist ethical ecological spiritual literary technical corporate and other underpinnings Diverse stories are told as alerts or nudges for the undergrads who as aspirant youth have in general hyperbolic discounting attitude towards social change The mind and heart of the undergrad reading this book will hopefully be ignited so as to endeavour to find out the purpose of economic education and how economics should be learnt in order to rectify the failures of our current socio economic system The seriously academic undergrad may also be inspired to pursue the long range objective of doing integrated studies and research for maximised understanding and holistic policy making which is of course easier to say than do
