Hands-On Large Language Models Jay Alammar, Maarten Grootendorst, 2024-09-11 AI has acquired startling new language capabilities in just the past few years. Driven by the rapid advances in deep learning, language AI systems are able to write and understand text better than ever before. This trend enables the rise of new features, products, and entire industries. With this book, Python developers will learn the practical tools and concepts they need to use these capabilities today. You'll learn how to use the power of pre-trained large language models for use cases like copywriting and summarization, create semantic search systems that go beyond keyword matching, build systems that classify and cluster text to enable scalable understanding of large amounts of text documents, and use existing libraries and pre-trained models for text classification, search, and clustering. This book also shows you how to build advanced LLM pipelines to cluster text documents and explore the topics they belong to, build semantic search engines that go beyond keyword search with methods like dense retrieval and rerankers, learn various use cases where these models can provide value, understand the architecture of underlying Transformer models like BERT and GPT, get a deeper understanding of how LLMs are trained, understand how different methods of fine-tuning optimize LLMs for specific applications, generative model fine-tuning, contrastive fine-tuning in context learning, etc.
