International partnerships in large science projects. ,1995 Over the past several decades the federal government has supported a wide range of research projects in science and technology Federal support has been crucial to many of the most important research and development R D achievements in defense space energy environmental and other science and technology programs Recently however federal budget deficits and concerns about the effectiveness of research efforts have intensified pressures on government R D spending making it difficult to sustain many ongoing efforts and limiting opportunities for new ventures These pressures coupled with the increasingly international character of science and technology R D activities have focused greater attention on bilateral and multilateral collaborative arrangements particularly for large scale long term projects in areas such as particle physics energy and environmental science and space The United States has pursued international collaborative projects in R D to raise the likelihood of scientific success for particularly complex endeavors to take greater advantage of international scientific expertise and facilities to address science and technology issues that have global implications to extend national scientific capabilities and especially for very large science projects to share costs and risks with other nations International collaboration however poses special challenges such as establishing R D priorities within and across different scientific disciplines developing funding and planning mechanisms that ensure the long term stability of projects and maintaining U S economic and national security interests **Science**

Committee on Science and Technology. Subcommittee on Science, Research, and Technology,1975 *Finding your Social Science Project* John Gerring,Jason Seawright,2022-10-13 The most important step in social science research is the first step

finding a topic Unfortunately little guidance on this crucial and difficult challenge is available Methodological studies and courses tend to focus on theory testing rather than theory generation This book aims to redress that imbalance The first part of the book offers an overview of the book s central concerns How do social scientists arrive at ideas for their work What are the different ways in which a study can contribute to knowledge in a field The second part of the book offers suggestions about how to think creatively including general strategies for finding a topic and heuristics for discovery The third part of the book shows how data exploration may assist in generating theories and hypotheses The fourth part of the book offers suggestions about how to fashion disparate ideas into a theory

**UNESCO science report**

UNESCO,2015-11-09 There are fewer grounds today than in the past to deplore a North South divide in research and innovation This is one of the key findings of the UNESCO Science Report towards 2030 A large number of countries are now incorporating science technology and innovation in their national development agenda in order to make their economies less reliant on raw materials and more rooted in knowledge Most research and development R D is taking place in high income countries but innovation of some kind is now occurring across the full spectrum of income levels according to the first survey of manufacturing companies in 65 countries conducted by the UNESCO Institute for Statistics and summarized in this report For many lower income countries sustainable development has become an integral part of their national development plans for the next 10 20 years Among higher income countries a firm commitment to sustainable development is often coupled with the desire to maintain competitiveness in global markets that are increasingly leaning towards green technologies The quest for clean energy and greater energy efficiency now figures among the research priorities of numerous countries Written by more than 50 experts who are each covering the country or region from which they hail the UNESCO Science Report towards 2030 provides more country level information than ever before The trends and developments in science technology and innovation policy and governance between 2009 and mid 2015 described here provide essential baseline information on the concerns and priorities of countries that could orient the implementation and drive the assessment of the 2030 Agenda for Sustainable Development in the years to come
