Masanet, 2004 Reconstructing Earth Braden Allenby, 2005-06-15 The Earth's biological chemical and physical systems are increasingly shaped by the activities of one species ours In our decisions about everything from manufacturing technologies to restaurant menus the health of the planet has become a product of human choice Environmentalism however has largely failed to adapt to this new reality Reconstructing Earth offers seven essays that explore ways of developing a new more sophisticated approach to the environment that replaces the fantasy of recovering pristine landscapes with a more grounded viewpoint that can foster a better relationship between humans and the planet Braden Allenby a lawyer with degrees in both engineering and environmental studies explains the importance of technological choice and how that factor is far more significant in shaping our environment in ways both desirable and not than environmental controls Drawing on his varied background and experience in both academia and the corporate world he describes the emerging field of earth systems engineering and management which offers an integrated approach to understanding and managing complex human

natural systems that can serve as a basis for crafting better more lasting solutions to widespread environmental problems
Reconstructing Earth not only critiques dysfunctional elements of current environmentalism but establishes a foundation for
future environmental management and progress one built on an understanding of technological evolution and the cultural
systems that support modern technologies Taken together the essays offer an important means of developing an
environmentalism that is robust and realistic enough to address the urgent realities of our planet Reconstructing Earth is a
thought provoking new work for anyone concerned with the past or future of environmental thought including students and
teachers of environmental studies environmental policy technological evolution or sustainability
