Multisensor Data Fusion and Machine Learning for Environmental Remote Sensing Ni-Bin Chang, Kaixu Bai, 2018-02-21

In the last few years the scientific community has realized that obtaining a better understanding of interactions between natural systems and the man made environment across different scales demands more research efforts in remote sensing An integrated Earth system observatory that merges surface based air borne space borne and even underground sensors with comprehensive and predictive capabilities indicates promise for revolutionizing the study of global water energy and carbon cycles as well as land use and land cover changes The aim of this book is to present a suite of relevant concepts tools and methods of integrated multisensor data fusion and machine learning technologies to promote environmental sustainability The process of machine learning for intelligent feature extraction consists of regular deep and fast learning algorithms The niche for integrating data fusion and machine learning for remote sensing rests upon the creation of a new scientific architecture in remote sensing science that is designed to support numerical as well as symbolic feature extraction managed by several cognitively oriented machine learning tasks at finer scales By grouping a suite of satellites with similar nature in platform design data merging may come to help for cloudy pixel reconstruction over the space domain or concatenation of time series images over the time domain or even both simultaneously Organized in 5 parts from Fundamental Principles of Remote Sensing Feature Extraction for Remote Sensing Image and Data Fusion for Remote Sensing Integrated Data Merging Data Reconstruction Data Fusion and Machine Learning to Remote Sensing for Environmental Decision Analysis the book will be a useful reference for graduate students academic scholars and working professionals who are involved in the study of Earth systems and the environment for a sustainable future The new knowledge in this book can be applied successfully in many areas of environmental science and engineering

Geospatial Technologies for Resources Planning and Management
Chandra Shekhar Jha, Ashish Pandey, V.M. Chowdary, Vijay Singh, 2022-05-24 This book focuses on the application of geospatial technologies for resource planning and management for the key natural resources e.g water agriculture and forest as well as the decision support system DSS for infrastructure development We have seen in the past four decades that the growing complexities of sustainable management of natural resources management have been very challenging The book has been written to leverage the current geospatial technologies that integrate the remotely sensed data available from various platforms the precise locational data providing geospatial intelligence and the advanced integration tools of Geographical Information Systems GIS Geospatial technologies have been used for water resources management employing geomorphological characteristics analysis of river migration pattern understanding the large scale hydrological process wet land classification and monitoring analysis of glacial lake outburst flood GLOF assessment of environmental flow and soil erosion studies water quality modelling and assessment and rejuvenation of paleochannels through groundwater recharge Geospatial technologies have been applied for crop classification and mapping soil moisture determination using RISAT 1 C

band and PALSAR 2 L band sensors inventory of horticulture plantations management of citrus orchards crop yield forecasting rice yield estimation estimation of evapotranspiration and its evaluation against lysimeter and satellite based evapotranspiration product for India to address the various issues of the agricultural system management Geospatial technologies have been used for generation of digital elevation model urban dynamics assessment mobile GIS application at grass root level planning cadastral level developmental planning and e governance applications system dynamics for sustainable development micro level water resources planning site suitability for sewage treatment plant traffic density assessment geographical indications of India archaeological applications and disasters interventions to elaborate various issues of DSS for infrastructure development and management Geospatial technologies have been employed for the generation and reconciliation of the notified forest land boundaries and also the land cover changes analysis within notified forest areas forest resource assessment management and monitoring and wildlife conservation and management This book aims to present high quality technical case studies representing the recent developments in the application of geospatial technologies for resource planning and management The editors hope that this book will serve as a valuable resource for scientists and researchers to plan and manage land and water resources sustainably

Biomedical Engineering Science and Technology Bikesh Kumar Singh, Ganesh Ram Sinha, Gourav Modanwal, 2026-02-04 This book constitutes the revised selected papers of the Third International Conference on Biomedical Engineering Science and Technology ICBEST 2025 held in Raipur India during April 10 11 2025 The 51 full papers presented in this book were carefully reviewed and selected from 112 submissions The papers focus on the following domains artificial intelligence in healthcare computational mechanics in healthcare and health informatics

Unmanned Aerial Vehicles: Breakthroughs in Research and Practice Management Association, Information Resources, 2019-05-03 First used in military applications unmanned aerial vehicles are becoming an integral aspect of modern society and are expanding into the commercial scientific recreational agricultural and surveillance sectors With the increasing use of these drones by government officials business professionals and civilians more research is needed to understand their complexity both in design and function Unmanned Aerial Vehicles Breakthroughs in Research and Practice is a critical source of academic knowledge on the design construction and maintenance of drones as well as their applications across all aspects of society Highlighting a range of pertinent topics such as intelligent systems artificial intelligence and situation awareness this publication is an ideal reference source for military consultants military personnel business professionals operation managers surveillance companies agriculturalists policymakers government officials law enforcement IT professionals academicians researchers and graduate level students

Quantum Computing and Artificial Intelligence in Logistics and Supply Chain Management Pushan Kumar Dutta, Pronaya Bhattacharya, Jai Prakash Verma, Ashok Chopra, Neel Kanth Kundu, Khursheed Aurangzeb, 2025-07-25 This book discusses the transformative potential of quantum computing in reshaping the landscape of supply chain management It

bridges the gap between these two dynamic fields offering a comprehensive guide to the application of quantum principles in supply chain operations Through detailed examples and case studies it highlights how quantum computing can tackle industry specific issues such as managing global supply chain disruptions enhancing production schedules and enabling real time decision making This book is for researchers professionals and technologists interested in quantum computing and supply chain practices Features Provides an in depth analysis of quantum computing technologies and their capacity to solve complex optimisation problems at scales unimaginable with traditional computing Examines the impact of quantum computing on manufacturing and logistics with a focus on sectors such as automotive and aerospace Real world scenarios illustrate how quantum solutions can streamline operations and drive efficiency Explores quantum algorithms and their use in addressing challenges like route optimisation inventory management and demand forecasting offering strategies to reduce costs and improve resilience Considers the current limitations ethical implications and the path to widespread adoption of quantum computing in supply chains emphasising the need for interdisciplinary collaboration

7th WACBE World Congress on Bioengineering 2015 James Goh,Chwee Teck Lim,2015-07-04 This volume publishes the proceedings of the WACBE World Congress on Bioengineering 2015 WACBE 2015 which was held in Singapore from 6 to 8 July 2015 The World Association for Chinese Biomedical Engineers WACBE organizes this World Congress biannually Our past congresses have brought together many biomedical engineers from over the world to share their experiences and views on the future development of biomedical engineering The 7th WACBE World Congress on Bioengineering 2015 in Singapore continued to offer such a networking platform for all biomedical engineers Hosted by the Biomedical Engineering Society Singapore and the Department of Biomedical Engineering National University of Singapore the congress covered all related areas in bioengineering

Communication and Intelligent Systems Harish Sharma,Vivek Shrivastava,Ashish Kumar Tripathi,Lipo Wang,2024-05-10 This book gathers selected research papers presented at the Fifth International Conference on Communication and Intelligent Systems ICCIS 2023 organized by Malaviya National Institute of Technology Jaipur India during December 16 17 2023 This book presents a collection of state of the art research work involving cutting edge technologies for communication and intelligent systems Over the past few years advances in artificial intelligence and machine learning have sparked new research efforts around the globe which explore novel ways of developing intelligent systems and smart communication technologies The book presents single and multi disciplinary research on these themes to make the latest results available in a single readily accessible source The work is presented in three volumes
