*The Future of Computing Performance* National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Sustaining Growth in Computing Performance, 2011-04-21 The end of dramatic exponential growth in single processor performance marks the end of the dominance of the single microprocessor in computing The era of sequential computing must give way to a new era in which parallelism is at the forefront Although important scientific and engineering challenges lie ahead this is an opportune time for innovation in programming systems and computing architectures We have already begun to see diversity in computer designs to optimize for such considerations as power and throughput The next generation of discoveries is likely to require advances at both the hardware and software levels of computing systems There is no guarantee that we can make parallel computing as common and easy to use as yesterday's sequential single processor computer systems but unless we aggressively pursue efforts suggested by the recommendations in this book it will be game over for growth in computing performance If parallel programming and related software efforts fail to become widespread the development of exciting new applications that drive the computer industry will stall if such innovation stalls many other parts of the economy will follow suit

*The Future of Computing Performance* describes the factors that have led to the future limitations on growth for single processors that are based on complementary metal oxide semiconductor CMOS technology It explores challenges inherent in parallel computing and architecture including ever increasing power consumption and the escalated requirements for heat dissipation The book delineates a research practice and education agenda to help overcome these challenges
