The Simulation of Interior Ballistic Performance of Guns by Digital Computer Program PAUL G. BAER, JEROME M. FRANKLE, ARMY BALLISTIC RESEARCH LAB ABERDEEN PROVING GROUND MD., 1962 When non conventional guns are to be considered or when detailed design information is required interior ballistic calculations become more difficult and time consuming To deal with these problems the equations which describe the interior ballistic performance of guns and gun like weapons have been programmed for the high speed digital computers available at the Ballistic Research laboratories The major innovation contained in the equations derived in this report is the provision for use of propellant charges made up of several propellants of different chemical compositions and different granulations Results obtained by the method described in this report compare favorably with those of other interior ballistic systems In addition considerably more detail is obtained in far less time A comparison with experimental data from well instrumented gun firings is also presented to demonstrate the validity of this method of computation

Tactical and Strategic Missile Guidance Paul Zarchan, 2007 The fifth edition of this best selling title has three new chapters on important topics related to improving missile guidance performance and several important new concepts in the Appendix The first new chapter presents several alternative ways of developing guidance laws numerically These techniques can be used to derive more advanced guidance laws when the missile guidance system dynamics become very complex An example is presented showing the advantages of a new advanced guidance law over more conventional guidance laws Previous editions of the text have shown that intentional or unintentional spiraling maneuvers on the part of a tactical ballistic missile can also make it particularly difficult for a pursuing missile to hit Estimating the target weave frequency is a critical component in advanced guidance laws that can be used to counter these spiraling threats The second new chapter presents a linear Kalman filter bank approach originally introduced in the 1960 s for accurately estimating the target weave frequency and improving missile guidance system performance So far all of the engagement simulations presented in this text have either been in one or two dimensions This was done to make it easier for the reader to more easily understand all of the concepts presented in the text The third new chapter provides several examples on how to convert previous engagement simulation code to three dimensions in both the tactical and strategic worlds A simplified mapping database is included with the text in order to demonstrate how geographical context can be provided in three dimensional strategic engagement simulations An example of one of the new concepts presented in the Appendix is the use of the discrete Fourier Transform for calculating the miss due to weaving targets Together with numerous new examples and easy to understand graphs and explanations readers with varied learning styles will find Tactical and Strategic Missile Guidance a staple for any aerospace engineer s library Companion software in both Macintosh and IBM compatible versions contains source code listings in FORTRAN C and MATLAB registered languages A detailed set

of appendices not only serves as a user's guide but also explains how the text's FORTRAN source can easily be converted to either C or MATLAB. The conversion technique plus detailed source code examples will be tools of interest to all engineers regardless of whether you specialize in missile guidance or other aerospace related fields.
