Web Cartography Ian Muehlenhaus, 2013-12-10 Web mapping technologies continue to evolve at an incredible pace. Technology is but one facet of web map creation; however, map design aesthetics and user interactivity are equally important for effective map communication. From interactivity to graphical user interface design, from symbolization choices to animation and from layout to typeface and color selection, *Web Cartography* offers the first comprehensive overview and guide for designing beautiful and effective web maps for a variety of devices. Written for those with a basic understanding of mapmaking but who may not have an in-depth knowledge of web design, this book explains how to create effective interaction, animation, and layouts for maps in online and mobile platforms. Concept-driven, this reference emphasizes cartographic principles for web and mobile map design over specific software techniques. It focuses on key design concepts that will remain true regardless of software technologies used. The book is supplemented with a website providing links to stellar web maps, video tutorials, and lectures; do-it-yourself labs; map critique exercises; and links to others' tutorials. Approachable, clear, and concise, the book provides a nontechnical, approachable guide to map design for the web. It provides best practices for map communication based on spatial data visualization and graphic design theory. By carefully avoiding overly technical jargon, it provides a solid launching pad from which students, practitioners, and innovators can begin to design aesthetically pleasing and intuitive web maps.

[Planning Support Systems: Best Practice and New Methods](#) Stan Geertman, John Stillwell, 2009-05-01 *Planning Support Systems: Retrospect and Prospect*. It has been nearly twenty years since the term planning support systems (PSS) first appeared in an article by Britton Harris (Harris 1989) and more than ten years since the concept was more broadly introduced in the academic literature (Harris and Batty 1993; Batty 1995; Klosterman 1997). As a result, the publication of a new book on PSS provides an excellent opportunity to assess past progress in the field and speculate on future developments. PSS have clearly become very popular in the academic world. This is the fourth edited book devoted to the topic, following Brail and Klosterman (2001), Geertman and Stillwell (2003), and a third by Brail (2008). Papers devoted to PSS have been published in the leading planning journals, and the topic has become a regular theme at academic conferences around the world. It has even spawned intellectual offspring such as spatial planning and decision support systems (SPDSS) and public participation planning support systems (PP-PSS). However, as Geertman and Stillwell point out in their introductory chapter, the experience with PSS in the world of professional practice has been disappointing. A substantial

number of PSS have been developed but most of them are academic prototypes or one off professional applications that have not been adopted elsewhere
