**Algorithms** Raffael Buff,2016-12-08 Streaming problems are algorithmic problems that are mainly characterized by their massive input streams Because of these data streams the algorithms for these problems are forced to be space efficient as the input stream length generally exceeds the available storage The goal of this study is to analyze the impact of additional information more specifically a hypothesis of the solution on the algorithmic space complexities of several streaming problems To this end different streaming problems are analyzed and compared The two problems most frequent item and number of distinct items with many configurations of different result accuracies and probabilities are deeply studied Both lower and upper bounds for the space and time complexity for deterministic and probabilistic environments are analyzed with respect to possible improvements due to additional information The general solution search problem is compared to the decision problem where a solution hypothesis has to be satisfied *Computational Logistics* Joachim R. Daduna,Gernot Liedtke,Xiaoning Shi,Stefan Voß,2023-09-06 This book constitutes the refereed proceedings of the 13th International Conference on Computational Logistics ICCL 2023 held in Berlin Germany during September 6 8 2023 The 32 full papers presented in this volume were carefully reviewed and selected from 71 submissions They are grouped into the following
