Boylestad, Gabriel Kousourou, 2015-07-09 The primary objectives of this revision of the laboratory manual include insuring that the procedures are clear that the results clearly support the theory and that the laboratory experience results in a level of confidence in the use of the testing equipment commonly found in the industrial environment For those curriculums devoted to a dc analysis one semester and an ac analysis the following semester there are more experiments for each subject than can be covered in a single semester The result is the opportunity to pick and choose those experiments that are more closely related to the curriculum of the college or university All of the experiments have been run and tested during the 13 editions of the text with changes made as needed The result is a set of laboratory experiments that should have each step clearly defined and results that closely match the theoretical solutions Two experiments were added to the ac section to provide the opportunity to make measurements that were not included in the original set Developed by Professor David Krispinsky of Rochester Institute of Technology they match the same format of the current laboratory experiments and cover the material clearly and concisely All the experiments are designed to be completed in a two or three hour laboratory session In most cases the write up is work to be completed between laboratory sessions Most institutions begin the laboratory session with a brief introduction to the theory to be substantiated and the use of any new equipment to be used in the session *Boylestad's Circuit Analysis* Robert L. Laboratory Manual for Introductory Circuit Analysis Robert L. Boylestad, Gabriel Kousourou, 2010 *Introductory Circuit Analysis* Robert L. Boylestad, 2023 Looking back over the past twelve editions of the text it is interesting to find that the average time period between editions is about 3.5 years This fourteenth edition however will have 5 years between copyright dates clearly indicating a need to update and carefully review the content Since the last edition tabs have been placed on pages that need reflection updating or expansion The result is that my copy of the text looks more like a dust mop than a text on technical material The benefits of such an approach become immediately obvious no need to look for areas that need attention they are well defined In total I have an opportunity to concentrate on being creative rather than searching for areas to improve A simple rereading of material that I have not reviewed for a few years will often identify presentations that need to be improved Something I felt was in its best form a few years ago can often benefit from rewriting expansion or possible reduction Such opportunities must be balanced against the current scope of the text which clearly has reached a maximum both in size and weight Any additional material requires a reduction in content in other areas so the process can often be a difficult one However I am pleased to reveal that the page count has expanded only slightly although an important array of new material has been added
