**Mind from Body** Don M. Tucker,2007-06-25 Although we no longer live in the relative simplicity of the Jurassic age and even though we are not aware of them primitive mammalian brain that developed in that era still live on inside our skulls and remain crucial to our daily functions The challenges we face today in the information age how to process the vastly greater more varied and quickly changing inputs we receive are very different from those that our ancestors faced during the Jurassic age As we struggle to process overwhelming amounts of information we may sometimes ask whether our brains can change to help us adapt In fact our brains have always changed gradually so the questions we should ask are really how our brains will change and whether we will be able to take full advantage of the changes perhaps even enhance them to help us keep up with the accelerating evolution of machines To understand how our brains will change we need to understand how they evolved in the first place as well as how the interactions of the resulting brain structures including the relics of primitive

mammalian and even reptilian processes influence how we think and act In Mind from Body Don Tucker one of the most original thinkers about organic information processing provides a fascinating analysis of how our brains have become what they are today and speculates intriguingly about what they could be tomorrow He presents important research that explains how personal experience creates the emotional and motivational bases of each of our thoughts even though we are usually not aware that it is happening Tucker shows that in exploring how these bodily thought processes still determine how we react to the world and make decisions we can become more rational in our actions free ourselves from fruitless or even self destructive patterns of behavior become more efficient and perhaps even wiser By combining the most up to date scientific thought and hands on experimental results expressed clearly and compellingly along with a story of hypothetical decision making Tucker explicates what is happening behind our thought processes as our minds struggle to maintain the pace of the information age

Death and Eternal Life John Hick,1994-01-01 In this cross cultural interdisciplinary study John Hick draws upon major world religions as well as biology psychology parapsychology anthropology and philosophy to explore the mystery of death He argues that scientific and philosophical objections to the idea of survival after death can be challenged and he claims that human inadequacy in facing suffering supports the basic religious argument for immortality
