**Comparing Efficiency of RCBD and Alpha Lattice Designs** Abdisa Gurmessa, Legese Negash, 2012 The choices of experimental design as well as of statistical analysis are of huge importance in field experiments The efficiency of alpha

lattice design and randomized complete block design RCBD were compared in maize trials conducted in 2010 at Bako Agricultural Research Centre BARC in Ethiopia on 45 treatments to assess the efficiency of each in minimizing experimental error coefficient of variation and error mean square for yield variable The coefficient of variations CV compared to be 12.6 % for alpha lattice design and 14.6 % for RCBD respectively The value of relative efficiency 1.35 indicates that the use of alpha lattice design instead of RCBD increased experimental precision by 35 percent The gain is considerable in terms of efficiency attained by using alpha lattice design which favors wider use of these designs under field conditions Based on the results we conclude that alpha lattice designs are more efficient than RCBD In order to increase the precision of agricultural field experiments researchers are advised to use alpha lattice designs for large number of treatments compared to RCBD

Crop Improvement by Omics and Bioinformatics Yan Zhao, Jun Li, Zhichao Wu, Xueqiang Wang, 2024-04-11 Crop improvement has been continuously driven by the demand for food security and sustainability The caloric and nutritional needs of a growing world population require that global food production increase by one billion tons over the next few decades but the current growth rate falls far short Moreover rapid changes in the environment are accelerating land degradation aggravating pests and diseases introducing extreme stresses and reducing crop productivity Genetic technologies and molecular breeding tools offer novel opportunities for modern crop breeding In the past few decades remarkable progress has been achieved in the discovery of genes for crop yield quality and resistance and in the dissection of plant molecular mechanisms With the continuous advancement in sequencing technology molecular markers and gene editing a large number of excellent crop varieties have been cultivated

**Dictionary of Plant Breeding** Rolf H. J. Schlegel, 2009-10-14 Arguably one of the oldest scientific traditions plant breeding began in Neolithic times with methods as simple as saving the seeds of desirable plants and sowing them later It was not until the re encounter with Mendel's discoveries thousands of years later that the genetic basis of breeding was understood Developments since then have provided further insight into how genes acting alone or in concert with other genes and the environment result in a particular phenotype From Abaxial to Zymogram the Dictionary of Plant Breeding contains clear and useful definitions of the terms associated with plant breeding and related scientific technological disciplines This second edition of a bestseller defines jargon provides helpful tables examples and breeding schemes and includes a list of crop plants with salient details Packed with data and organized to make that data easy to access this revised and expanded reference provides comprehensive coverage of the latest discoveries in cytogenetics molecular genetics marker assisted selection experimental gene transfer seed sciences crop physiology and genetically modified crops A

complex subject plant breeding draws from many scientific and technological disciplines often making it difficult to know the precise meanings of many terms and to accurately interpret specific concepts Most dictionaries available are highly specific and fragmentary As in the previous edition this dictionary unifies concepts by including the specific terms of plant breeding and terms that are adjusted from other disciplines Drawing on the author s 30 years of experience the dictionary provides an encyclopedic list of commonly used technical terms that reflect the latest developments in the field

This study was conducted with the overall purpose of comparing the performance of commonly used incomplete block designs over that of the classical RCBD Among the incomplete block designs Lattice design and alpha lattice designs were employed The comparison was statistically done mainly based on mean square errors and their corresponding CVs for each design For this purpose three datasets obtained from SARI were analyzed using CRD RCBD lattice and alpha lattice designs The results of the soybean variety trial data containing 8 treatments having two factors with 3 replications at five different locations were used to assess the performance of RCBD over CRD The result showed that 31.3, 53 and 13% precision increased with RCBD over CRD for four sites namely Hawassa Areka Gofa and Bonga respectively The CV for CRD is 25.9, 19.2, 7.3 and 12.9% for the four sites above respectively While that of RCBD is 22.6, 18.8, 5.9 and 12.3% respectively This again confirms that RCBD is more efficient than CRD under those tested sites The implication of the insignificant block effect is there is no need of block for this site
