2.5 The Demographic Transition Model

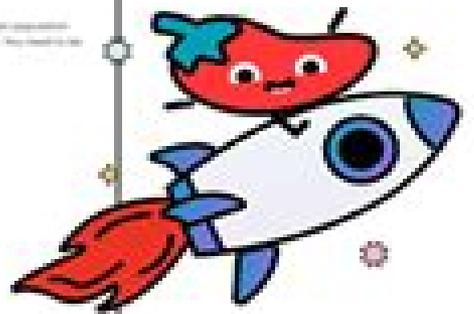

Demographic Transition Model

The Demographic Transition Model (DTM) is a conceptual tool for understanding population change in different stages of economic development. It shows how birth rates and death rates change over time as a country develops.

Stage 1

Stage 1 is the original high birth rate and high death rate. Because of this, the natural increase rate is close to zero. The population grows slowly because the death rate is so high. The population remains the same. The birth rate and the death rate are both high because of high infant mortality.
