

### Ideal gas law - problems and solutions

1. Ideal gases in a closed container initially have volume  $V$  and temperature  $T$ . The final temperature is  $5/4T$  and the final pressure is  $2P$ . What is the final volume of gases.

Known :

Initial volume ( $V_1$ ) =  $V$

Initial temperature ( $T_1$ ) =  $T$

Final temperature ( $T_2$ ) =  $5/4 T$

Initial pressure ( $P_1$ ) =  $P$

Final pressure ( $P_2$ ) =  $2P$

Wanted : Final volume ( $V_2$ )

Solution :

$$\frac{P_1 V_1}{T_1} = \frac{P_2 V_2}{T_2}$$

$$\frac{P V}{T} = \frac{(2P) V_2}{5/4 T}$$

$$\frac{V}{1} = \frac{2 V_2}{5/4}$$

$$5/4 V = 2 V_2$$

$$V_2 = \frac{5V}{4} \cdot \frac{2}{1}$$

$$V_2 = \frac{5V}{4} \times \frac{1}{2}$$

$$V_2 = \frac{5V}{8}$$

2. Determine the volume of 2.00 moles of gases (ideal gas) at STP. STP = Standard Temperature and Pressure.

Known :

Moles of gas ( $n$ ) = 2 moles

Standard temperature ( $T$ ) =  $0^\circ\text{C} = 0 + 273 = 273$  Kelvin

Standard pressure ( $P$ ) = 1 atm =  $1.013 \times 10^5$  Pa

Universal gas constant ( $R$ ) = 8.315 Joule/mole.Kelvin

Wanted : Volume of gases ( $V$ )

Solution :

## Gas Law Problems With Solutions:

Survival Guide to General Chemistry Patrick E. McMahon, Rosemary McMahon, Bohdan Khomtchouk, 2019-02-13 This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific, detailed, step-by-step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples, and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step-by-step process for problem solving, whether mathematical or conceptual. Each topic has greatly expanded examples and solved practice problems containing significantly more detail than found in comprehensive texts. Includes a chapter designed to eliminate confusion concerning acid-base reactions, which often persists through working with acid-base equilibrium. Many chapters provide alternative viewpoints as an aid to understanding. This book addresses a very real need for a large number of incoming freshmen in STEM fields. *Dr. Salm's Chemistry Problem Drill Book* Robert J. Salm, Robert J. Salm, Robert J. Salm Ph.D., 2005. This drill book contains many common problem types that are asked in General Chemistry classes in High School and College. This work will give you practice with the major problem types as you prepare for finals and standardized tests. **Math Concepts for Food Engineering** Richard W. Hartel, D.B. Hyslop, Terry Howell, Jr., 1997-05-19. Food industry managers, engineers, and scientists require a personal repertory of mathematical tools to find solutions to a variety of work problems. These problems relate to processing, research, analysis, and other operations that require mathematical solutions. This new handbook provides a practical review of required basic mathematical methods and relates them to specific areas of food industry problem solving. Prepared for students in undergraduate food science programs, the handbook also serves the needs of food industry technical personnel who would be helped by a review of basic math for food engineering and non-technical managers who seek an introduction to food engineering math and problem solving. Each chapter on a math or problem-solving skill begins with fundamental concepts, presents step-by-step procedures in the skill, and provides numerous practical, illustrative examples. Practice problems with answers in the appendix provide for self-testing and reinforcement of learning. All of the math skills presented relate to common food industry problems. From the text: In food engineering and any other mathematically oriented discipline, one must become adept at problem solving using equations and mathematical principles. Many of the problems that food scientists and engineers face require the ability to apply physical and mathematical principles to solve equations and calculate necessary information. Thus, problem-solving abilities are extremely important, and we should be familiar with the general steps in problem solving. *Journal of Chemical Education*, 1925.
