Can static type systems speed up programming? An experimental evaluation of static and dynamic type systems Sebastian Kleinschmager,2012-08-14 Master s Thesis from the year 2011 in the subject Computer Science Software grade 1 0 University of Duisburg Essen Institute for Computer Science and Business Information Systems course Informatik Empirische Softwareforschung language English abstract Type systems of programming languages are a much discussed topic of software engineering There are many voices arguing towards static as well as dynamic type systems although their actual impact on software development is rarely evaluated using rigorous scientific methods In the context of this work a controlled experiment with 36 participants was conducted which tried to compare the performance of software developers using a static and a dynamic type system for the same tasks using an undocumented API The two programming languages used were Java and Groovy The experiment and its results are analyzed and discussed in this thesis Its main hypothesis was that a static type system speeds up the time developers need to solve programming tasks in an undocumented API The main results of the experiment speak strongly in favor of this hypothesis because the static type system seems to have a significantly positive impact on the development time Foundations of Physical Science, with Earth and Space Science Tom Hsu,2003 **Outlines for Experimental Psychology** Harry Levi Hollingworth,1914 **Forum** , **U.S. Government Research & Development Reports** ,1965 Proceedings ,1967 **Cognitive Psychology** ,1983 Auto-motor Journal ,1907 **Silent Reading** Charles E.
