Regulating AI Shreyas Parab,Mikey Fischer,Gpt 3,2021-02-11 Until somewhat recently

AI was mostly an academic pursuit that always seemed far away from being released outside of academia Today however AI is touching almost every aspect of human life As such there are several emerging legal and policy questions that society will need to reckon with Although we are faced with new challenges we have many opportunities to utilize true and tested frameworks and legal infrastructure that has been centuries in the making This book tries to bring together two disparate fields law and technology and give the reader and understanding of their convergence and divergence We start to answer many of these questions or at least open the discussion that acknowledges its complexity This is an exploration of those questions and where possible we try to go over information that might be helpful in appreciating the depth of those questions As technology and law are two large subjects that span a wide range we do our best to narrow the scope of the chapters as best we can This book should not be taken as original research in that we hypothesize how the legal system should change or what the answers to these questions are We instead look at the underlying logic that is provided within current legal frameworks to see how they can be adapted to fit current AI and future generations of much more powerful AI Just as this is an emerging field we are emerging researchers interested in starting to put pen to paper on the kind of questions we will spend our lifetimes pursuing In the last chapter we ask AI to make some forward looking projections about how it sees AI and law intersecting in the future In summary this book is not intended to convey original research or ideas about how AI and the law should interact in the future It is not formal academic research but rather thoughts ideas and frameworks that two students wanted to compile based on classwork across Stanford and externally [AI & US ROOZBEH. ALIABADI,2025](#)

[AI for the Rest of Us](#) Phaedra Boinodiris,Beth Rudden,2023 AI is a way for us to understand and grasp knowledge information and put data into context It is being used globally to make all kinds of decisions that directly impact our lives and yet most understand very little about it We start with the definition that data is an artifact of human experience We need the widest variance of humans irrespective of your role and skillset developing AI so that everyone s story is a part of the models we are building Ergo this book is for you The reader will explore a conceptual model for data and understand what humans are good at and what machines are good at The book dives into why accountability fairness transparency explainability kindness robustness and data privacy are essential concepts in AI that are not being taught nor insisted upon Earning trust in AI is not a technical challenge but socio technical By the end of this book the reader will be able to detail power structures with respect to AI and understand the changing roles and responsibilities in the AI field They will also be able to advocate for the culture required to curate AI responsibly and what it means to be a good parent to AI This book is an essential read for anyone interested in understanding AI and the responsibility that comes with developing and using it [Robots Are People Too](#) John Frank Weaver, The only book of its kind to look at how our legal system needs to change to accommodate a world in which machines in addition to people make decisions For years robots were solely a matter of science fiction Today artificial intelligence technologies serve to accelerate our already fast paced lives even further From Apple s Siri to the Google Car to

GPS machines and technologies that make decisions and take action without direct human supervision have become commonplace in our daily lives. As a result, laws must be amended to protect companies that produce robots and the people that buy and use them. This book provides an extensive examination of how numerous legal areas including liability, traffic, zoning, and international and constitutional law must adapt to the widespread use of artificial intelligence in nearly every area of our society. The author scrutinizes the laws governing such fields as transportation, medicine, law enforcement, childcare, and real estate development.
