Conventional and ZVT Synchronous Buck Converter Design, Analysis, and Measurement Mark Cory, 2010 The role played by power converting circuits is extremely important to almost any electronic system built today Circuits that use converters of any type depend on power that is consistent in form and reliable in order to properly function In addition today's demands require more efficient use of energy from large stationary systems such as power plants all the way down to small mobile devices such as laptops and cell phones This places a need to reduce any losses to a minimum The power conversion circuitry in a system is a very good place to reduce a large amount of unnecessary loss This can be done using circuit topologies that are low loss in nature For low loss and high performance soft switching topologies have offered solutions in some cases Also limited study has been performed on device aging effects on switching mode power converting circuits The impact of this effect on a converter's overall efficiency is theoretically known but with little experimental evidence in support In this thesis non isolated buck type switching converters will be the main focus This type of power conversion is widely used in many systems for DC to DC voltage step down Newer methods and topologies to raise converter power efficiency are discussed including a new synchronous ZVT topology Also a study has been performed on device aging effects on converter efficiency Various scenarios of voltage conversion switching frequency and circuit components as well as other conditions have been

considered Experimental testing has been performed in both cases ZVT s benefits and device aging effects the results of which are discussed as well *A High Step-down Buck Converter with Coupled Inductor and Switched Capacitor* [1],2013

A Non-Isolated High Step-Down DC-DC Converter with Zero Voltage Switching ,2025 *Design of High Efficiency Step-down Switched Capacitor DC/DC Converter* Mengzhe Ma,2003 **A Low Volume Hybrid Step-Down DC-DC Converter For Battery Powered Portable Applications** Yingxian Ma,2018 This thesis describes a hybrid step down dc dc converter which compared to conventional buck provides a lower volume solution in battery powered portable applications The new architecture combines a switched capacitor and conventional buck converter such that the size of the inductor is reduced Moreover the introduced topology improves efficiency by up to a 5% compared to a conventional buck The results are verified with an experimental prototype The thesis also compares the introduced topology with state of the art step down topologies using an optimization tool that generates the highest efficiency solutions for a given volume constraint *High Step-Down DC-DC Converter with Low Output Voltage Ripple* [1],2019 **Power-Switching Converters** Simon Ang,Alejandro Oliva,Gary Griffiths,Richard Harrison,2010-12-20 Significantly expanded and updated with extensive revisions new material and a new chapter on emerging applications of switching converters Power Switching Converters Third Edition offers the same trusted accessible and comprehensive information as its bestselling predecessors Similar to the two previous editions this book can be used for a *Implementation of Non-Isolated High Step-Down Ratio DC-DC Converter with Wide Input Voltage Range* ,2024 **A Novel Step-up/step-down Full-bridge DC-DC Converter for Distributed Solar Power Applications** Yu Cao,2015 **Implementation of Interleaved Voltage Clamped High Step-Down DC-DC Converter with Soft Switching** ,2023 **A Power Electronic Converter for High Voltage Step Down DC-DC Conversion** Frederik H.
