**Implementing a crowd-sourced picture archive for Bad Harzburg** Rieke Freund, Jan Philip Rättsch, Franziska Hradilak, Benedikt Vidic, Oliver Heß, Nils

Lißner, Hendrik Wölert, Jens Lincke, Tom Beckmann, Robert Hirschfeld, 2023-06-06 Pictures are a medium that helps make the past tangible and preserve memories Without context they are not able to do so Pictures are brought to life by their associated stories However the older pictures become the fewer contemporary witnesses can tell these stories Especially for large analog picture archives knowledge and memories are spread over many people This creates several challenges First the pictures must be digitized to save them from decaying and make them available to the public Since a simple listing of all the pictures is confusing the pictures should be structured accessibly Second known information that makes the stories vivid needs to be added to the pictures Users should get the opportunity to contribute their knowledge and memories To make this usable for all interested parties even for older less technophile generations the interface should be intuitive and error tolerant The resulting requirements are not covered in their entirety by any existing software solution without losing the intuitive interface or the scalability of the system Therefore we have developed our digital picture archive within the scope of a bachelor project in cooperation with the Bad Harzburg Stiftung For the implementation of this web application we use the

UI framework React in the frontend which communicates via a GraphQL interface with the Content Management System Strapi in the backend The use of this system enables our project partner to create an efficient process from scanning analog pictures to presenting them to visitors in an organized and annotated way To customize the solution for both picture delivery and information contribution for our target group we designed prototypes and evaluated them with people from Bad Harzburg This helped us gain valuable insights into our system s usability and future challenges as well as requirements Our web application is already being used daily by our project partner During the project we still came up with numerous ideas for additional features to further support the exchange of knowledge

*JavaScript Everywhere* Adam D. Scott, 2020-02-06 JavaScript is the little scripting language that could. Once used chiefly to add interactivity to web browser windows, JavaScript is now a primary building block of powerful and robust applications. In this practical book, new and experienced JavaScript developers will learn how to use this language to create APIs as well as web, mobile, and desktop applications. Author and engineering leader Adam D. Scott covers technologies such as Node.js, GraphQL, React, React Native, and Electron. Ideal for developers who want to build full stack applications and ambitious web development beginners looking to bootstrap a startup, this book shows you how to create a single CRUD style application that will work across several platforms. Explore GraphQL's simple process for querying data. Learn about shared authentication for APIs, web apps, and native applications. Build performant web applications with React and Styled Components. Use React Native to write cross platform applications for iOS and Android that compile to native code. Learn how to write desktop applications with Electron.

*Production Ready GraphQL* Marc-Andre Giroux, 2020-03-23 While GraphQL is a technology mainly driven by the needs of clients, there is a clear lack of resources on how to build reliable GraphQL servers. Over the last few years, I helped build and maintain some of the biggest GraphQL APIs out there at both Shopify and GitHub. During those years, I also worked with various companies with their adoption of GraphQL. From my experiences with GraphQL, I've observed the good, the bad, and the ugly. This led to many talks and blog posts on the subject, but I still found that teams and individuals willing to use GraphQL in a pragmatic way lacked the resources to do so. This is what led me to write this book: a collection of learnings and good practices when building GraphQL schemas at scale. Every language and every GraphQL implementation does things slightly differently. This book is completely language agnostic and instead focuses on concepts and patterns that are achievable, no matter how you're building a GraphQL server. Think of it as a complete journey of what goes into building a GraphQL API, from design to architectures to implementation and even documentation.

**How to Accelerate Microservices Development: A Practical Guide to Applying Code Generation** Ivan Kashuba, 2021-04-22 Apriorit experts wrote this ebook to share their experience working with microservice architectures. **Serverless GraphQL APIs with Amazon's AWS AppSync** Matthias Biehl, 2018-05-30 This book gets you a running start with serverless GraphQL APIs on Amazon's AWS AppSync. Whether you are new to GraphQL or you are an experienced GraphQL developer, this book will provide you with the knowledge needed to get started with AWS AppSync. Do you like learning by doing? After quickly covering the GraphQL foundations, you will dive into the practice of developing APIs with AWS AppSync with in depth

walkthroughs screenshots and code samples Do I learn everything I need to get started The book guides you through the step by step process of designing GraphQL APIs creating a GraphQL schema developing GraphQL APIs connecting data sources developing resolvers with AppSync templates securing your API offering real time data developing offline support and synchronization for your apps and much more Why GraphQL GraphQL is now a viable option for modern API design And since Facebook Yelp and Shopify have built successful APIs with GraphQL many companies consider following in the technological footsteps of these tech giants Using GraphQL is great but by itself it is only half the rent It requires the manual installation and maintenance of software infrastructure components Why Serverless GraphQL with AppSync AppSync is a cloud based platform for GraphQL APIs It is serverless so you waste no time setting up infrastructure It scales up and down dynamically depending on the load It supports your app developers with an SDK for synchronization and offline support You pay only what you use so no upfront investment is needed and it may save your organizations thousands of dollars in IT costs
