Brears, 2021-10-20 Traditionally the ocean economy is viewed solely as a mechanism for economic growth In this business as usual approach large scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources often without consideration of how those activities impact the future health or productivity of those same resources This has led to aquatic ecosystems being viewed and treated as limitless resources the marine environment becoming a dumping ground for waste overfishing diminishing fishing stocks ocean habitats being degraded from coastal developments sea level rise impacting coastal communities and infrastructure increasing ocean acidification and the marginalisation of poor coastal communities Recognising the failings of the traditional ocean economy there is a transition underway around the world towards the Blue Economy This concept moves beyond the business as usual approach with economic development and ocean health complementary to one another In the Blue Economy the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced Therefore economic activity is in balance with the long term capacity of the ocean ecosystems to support this activity and remain healthy and resilient This book will provide an overview of the various technologies used to promote cross sectoral and multi scalar collaboration facilitate the integrated management of sectors and resources foster partnerships between governments and industry encourage R D in new technologies in resource use and management and scale up innovative financing mechanisms in the development of a Blue Economy Also the book will contain in depth case studies that illustrate how locations of differing climates lifestyles and income levels have implemented technologies to facilitate the development of the Blue Economy *Developing the Blue Economy* will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy

The Caribbean Blue Economy Peter Clegg,Robin Mahon,Patrick McConney,Hazel A. Oxenford,2020-10-22 The

Blue Economy is emerging on the global scene as a powerful and persuasive new concept for sustainable development based on economic activities associated with the ocean. Several regions globally have adopted this concept at national and regional levels including the Caribbean. Given the complex multisectoral and multilevel nature of the Blue Economy it is clear that different approaches will be needed for different regions. Hence this volume explores the opportunities, threats, and risks involved in operationalising the Blue Economy in the Wider Caribbean Region defined as northern Brazil to the USA and all mainland and island countries and territories in between. The first part of the book looks at where the region stands in the global picture regarding adoption of the Blue Economy and what is planned. The second set of chapters examines key crosscutting issues such as ecosystem services, climate change, and governance at national and regional levels that could make or break the Blue Economy initiative. The book then goes on to explore the main sectoral activities that will constitute the Blue Economies in the region: fisheries, tourism, shipping, and transport, renewable energy, oil and gas, seabed mining, and waste management are all considered. The book ends with a synthesis of the political and technical requirements to overcome threats and take advantage of opportunities in the Blue Economy.

Preparing a Workforce for the New Blue Economy Liesl Hotaling, Richard W. Spinrad, 2021-05-27. *Preparing a Workforce for the New Blue Economy: People, Products, and Policies* discusses the Blue Economy, how the industry will develop, and how to train the next generation. The book considers the use of big data, key skillsets, training, undergraduate and graduate students, the Transition Assistance Program (TAP) in the US, economic opportunities in African coastal countries, and governmental agencies, non-profits, and NGOs. Finally, a broad range of case studies are provided covering oil spills, commercial fishing, data protection, and harvesting, sustainability, and weather forecasting, all presented to highlight the educational requirements of the workforce and potential economic opportunities. Coordinates efforts from different disciplines and sectors and shares effective teaching practices and approaches. Includes comprehensive case studies that highlight the educational requirements of the workforce and potential economic opportunities. Presents a framework for unifying several workforce sectors that are dependent upon the ocean.

The Empty Sea Ilaria Perissi, Ugo Bardi, 2021-02-12. The Blue Economy is used to describe all of the economic activities related to the sea, with a special emphasis on sustainability. Traditional activities such as fisheries, but also undersea mining, tourism, and scientific research are included, as well as the phenomenal growth of aquaculture during the past decade. All of these activities and the irresistible prospect of another new frontier has led to enthusiastic and most likely overenthusiastic assessments of the possibilities to exploit the sea to feed the world, provide low cost energy, become a new source of minerals, and other future miracles. This book makes sense of these trends and of the future of the blue economy by following our remote ancestors who gradually discovered the sea and its resources, describing the so-called fisherman's curse, or why fishermen have always been poor, explaining why humans tend to destroy the resources on which we depend, and assessing the realistic expectations for extracting resources from the sea. Although the sea is not so badly overexploited as the land, our

demands on ecosystem services are already above the oceans sustainability limits Some new ideas including fishing down for untapped resources such as plankton could lead to the collapse of the entire marine ecosystem How Neanderthals crossed the sea in canoes how it was possible for five men on a small boat to kill a giant whale what kind of oil the virgins of the Gospel put into their lamps how a professor of mathematics Vito Volterra discovered the equations of fishing why it has become so easy to be stung by a jellyfish while swimming in the sea and how to play Moby Dick a simple board game that simulates the overexploitation of natural resources are just some of the questions that you will be able to answer after reading this engaging and insightful book about the rapidly expanding relationship between humanity and the sea

The Potential of the Blue Economy World Bank, 2017 This report was drafted by a working group of United Nations entities the World Bank and other stakeholders to suggest a common understanding of the blue economy to highlight the importance of such an approach particularly for small island developing states and coastal least developed countries to identify some of the key challenges its adoption poses and to suggest some broad next steps that are called for in order to ensure its implementation Although the term blue economy has been used in different ways it is understood here as comprising the range of economic sectors and related policies that together determine whether the use of oceanic resources is sustainable An important challenge of the blue economy is thus to understand and better manage the many aspects of oceanic sustainability ranging from sustainable fisheries to ecosystem health to pollution A second significant issue is the realization that the sustainable management of ocean resources requires collaboration across nation states and across the public private sectors and on a scale that has not been previously achieved This realization underscores the challenge facing the Small Island Developing States SIDS and Least Developed Countries LDCs as they turn to better managing their blue economies

The Blue Economy and Small States Julian Peter Roberts, Ahmed Ali (Research officer), 2016 Island nations have benefited from their ocean resources with marine uses and activities contributing to their economic development There is a growing appreciation of the critical role oceans play in sustainable economic growth and the need to manage and protect coastal and marine ecosystems that are the fundamental basis for that growth

[The Blue Economy in Sub-Saharan Africa](#) DONALD SPARKS, 2021-06-16 The blue economy comprising coastal and marine resources offers vast benefits for sub Saharan Africa of the 53 countries and territories in the region 32 are coastal states there are 13 million sq km of maritime zones more than 90% of the region's exports and imports come by sea and the African Union hails the blue economy as the new frontier of African renaissance Despite their importance the region's coastal and marine resources have been neither fully appreciated nor fully utilized They are only now being recognized as being key to Africa's potential prosperity As the region grows it has in general not taken adequate safeguards to protect these valuable resources That is partly because some of the problems pollution for example are regional and know no borders All too often short term gains are made at the expense of the long term overfishing for example This book provides for the first time a study of the constraints and opportunities the blue economy

offers for sub Saharan Africa It includes an introduction and overview sectoral analyses including tourism fisheries mineral resources culture shipping and maritime safety country case studies and analyses of regional and international efforts towards better coastal zone and marine management
