

An aerial photograph of a vineyard. In the upper left, a red tractor is pulling a wooden-covered trailer. Below it, several workers wearing hats and carrying baskets are walking through the rows of grapevines. The vines are lush green, and the rows are neatly spaced. The overall scene depicts active agricultural work in a vineyard.

Agri-environmental Management in Europe: Sustainable Challenges and Solutions - From Policy

Interventions to Practical Farm Management Kathy Lewis, John Tzilivakis, Douglas Warner, Andy Green, 2018-04-04
Modern agriculture faces many challenges most crucially food security and the need for sustainable farming systems
Decisions and actions in the agricultural sector come from government and stakeholder policies and on farm decision making
This comprehensive monograph provides a perspective on the current state of agri environmental management in Europe
from both a policy and practical perspective Some of the issues in agriculture discussed are climate change and air pollution
biodiversity water use and quality pesticides pathogens flooding and drought energy resources land use soil composition
nutrients livestock cropping habitat management and cultural considerations These important issues form the framework of
the book with each issue discussed in the context of its history and asking the questions why is it an issue what is the current
scientific understanding regarding it and how has policy shaped it The book takes an integrated approach by not just
examining these issues separately but examining the whole system in which these problems are manifested At the end
technologies and solutions which are currently being developed and could be used in the future are discussed and the
horizon scanned for future environmental challenges Agri environmental Management in Europe is an authoritative source
for both undergraduate and post graduate studies that consider the agri environmental challenges society faces 5m Books
