Forex Trading Using Volume Price Analysis - Full Colour Edition Anna Coulling,2018-01-29 For many traders price and the price chart itself are the beginning and the end of technical analysis All they consider is the price and nothing else However for myself and many others this approach completely ignores the extension of price to its logical association with volume which together reveals the market's true intent and whether a move is genuine or fake This approach was first developed by the founding father of technical analysis Charles Dow more than a century ago and then further developed and codified by Richard Wyckoff into his three laws and what I now call Volume Price Analysis In this book you will discover how to apply volume price analysis to your own forex trading regardless of whether you are a scalper or longer term swing or trend trader Through over 100 worked chart examples with annotations you will learn how to read the market for yourself and anticipate where the market is going next No longer will you be caught off guard or trapped into weak positions And in addition you can apply this powerful methodology directly to your trading or it can be integrated and blended into existing trading tactics and strategies All that is required is a chart with volume and price

Volume price analysis answers the one question all traders want an answer to Where is the market heading next *The Ed*

Technical Analysis of Stocks and Commodities,2008

THINK LIKE A WHALE TRADE AS A SHARK George Protonotarios, There are three important conditions to trade successfully in any financial market a strong fundamental landscape a nice market structure and an accurately measured trading range If fundamentals agree and the market structure has proven itself knowing the trading range is the

only thing you need This book contains a wide variety of technical analysis methods and techniques in order to help investors recognize market structure in early stages identify support and resistance and accurately measure the trading range However the complex world of financial trading is a zero sum game Someone has to lose in order for someone else to make a profit And as there are a few people making a lot of money there are a lot of others who lose constantly This is why clever investors always add a contrarian flavor to their decision making process and most of the time trade against the public sentiment All financial asset classes follow a similar pattern that starts with fear and ends with greed Smart traders enter the market when the fear of retail traders pushes prices below their fair value and sell when the retail greed pushes prices well above their fair value This never ending circle between fear and greed creates numerous opportunities for patient traders On a macro scale fundamental analysis is the perfect tool for identifying the fair value of a financial asset and measure risk Risk and reward are the two crucial inputs of any investment decision In addition technical analysis is useful for the identification of price trends and the optimization of entries in the market Professional traders use both these analysis methods in their decision making process They use fundamental analysis to decide what to buy and technical analysis to decide when to buy To summarize this concept in just one phrase always think like a fundamentalist investor when deciding what to buy and act as a technician trader when entering the market Think like a whale and trade as a shark Successful trading requires a strong personality and a character that will allow you to trade without fear and greed Weak hands lose money in the long run The stronger your character the stronger your hands If you want to be a successful trader start by building your character something that cannot be easily taught CHAPTERS This book covers a wide range of fundamental resources and technical analysis techniques in order to help investors seek proof in the right place Any successful trading decision must have a fundamental background Chapter 1 begins with the basics of fundamental analysis when trading equities Forex currencies and cryptocurrencies The main goal of studying fundamentals is to identify investment opportunities Opportunity can be defined as the difference between the current price of an asset and its real value Fundamental analysis can recognize risk and reward the two most crucial inputs of the decision making process In Chapters 2 3 4 5 and 6 you will find various technical analysis methods with many examples and charts Trading charts can be read significantly easier than raw data Reading charts is useful not only for identifying key trends but also for recognizing major support and resistance levels Furthermore you will learn how to use moving averages RSI the Fibonacci Numbers the Fibonacci Retracement and the definition of the long term trend in any financial market By combining all these different technical analysis tools you will be able to recognize any market conditions identify strong trends spot the potential levels of a trend reversal but most importantly accurately measure the trading range In Chapter 7 you will learn about the role of market volatility and its importance for managing risk and achieving portfolio diversification How to use the Bollinger Bands and ATR when trading indices and Beta when trading individual stocks In addition you will learn about the VIX Index and its ability to predict a

financial crisis but also how to use options contracts to spot incoming market volatility Finally you will learn about the basics of Foreign Exchange and cryptocurrency volatility In Chapter 8 you will find information about seasonality statistics and seasonal patterns Seasonality refers to a time period in which market data tends to experience common and predictable behavior Whenever a seasonal pattern has been repeated regularly it becomes statistically significant However seasonality reflects an average reliance on past market data That means seasonal patterns provide a window of opportunity and not an independent forecasting framework A seasonal pattern can be any price pattern correlated to a particular month quarter or semester You will be able to find seasonal patterns for Dow Jones Industrial three popular currency pairs EURUSD GBPUSD and USDJPY and two key cryptocurrency pairs Bitcoin and Ethereum against the US dollar In Chapter 9 you will learn about market sentiment The market sentiment refers to the views opinions and expectations of investors toward the future market conditions It is very important to distinguish between the experts sentiment that you should trade in line with it and the public sentiment that you should generally trade against it The greatest trading opportunities in life are against the general public sentiment You will learn also about the Fear Greed index the Overnight Repo Rate the Perpetual Contracts and how to use the Commitment of Traders COT report If there is one golden rule when investing it s to always diversify your investment decisions This rule is applicable in every aspect of our life In Chapter 10 you will learn about money management Money management refers to the process of achieving risk control over your portfolio by eliminating the unnecessary risk and it is a key ingredient of long term trading success You will learn about market correlations cross market connections position sizing the 2% rule the Reward Risk Ratio the Win Ratio and why you should always trade small account sizes By combining the information and tools presented in this book you have the opportunity to better understand the mechanics of the global financial markets and significantly increase your odds of winning in the long run Success is all about education and building the right character The more educated you become the stronger your character when others are greedy and the stronger your hands when others are fearful George M Protonotarios Financial Analyst M Sc Int Banking Finance Salford UK www TradingCenter org
