**Mobile Mapping** Clancy Wilmott,2025-10-01 This book argues for a theory of mobile mapping a situated and spatial approach towards researching how everyday digital mobile media practices are bound up in global systems of knowledge and power Drawing from literature in media studies and geography and the work of Michel Foucault and Doreen Massey it examines how geographical and historical material social and cultural conditions are embedded in the way in which contemporary digital cartographies are read deployed and engaged This is explored through seventeen walking interviews in Hong Kong and Sydney as potent discourses like cartographic reason continue to transform and weave through the world in ways that haunt mobile mapping and bring old conflicts into new media In doing so Mobile Mapping offers an interdisciplinary rethinking about how multiple translations of spatial knowledges between rational digital epistemologies and tacit ways of understanding space and experience might be conceptualized and researched

Beginning Google Maps Applications with Rails and Ajax Andre Lewis, Cameron Turner, Jeffrey Sambells, Michael Purvis,2007-05-02 The Google Maps API remains one of the showcase examples of the Web 2.0 development paradigm Beginning Google Maps Applications with Rails and Ajax From Novice to Professional is the first book to comprehensively introduce the service from a developer perspective showing you how you can integrate mapping features into your Rails driven web applications Proceeding far beyond simplistic map display you'll learn how to draw from a variety of data sources such as the U.S. Census Bureau's TIGER Line data and Google's own geocoding feature to build comprehensive geocoding services for mapping many locations around the world The book also steers you through various examples that show how to encourage user interaction such as through pinpointing map locations adding comments and building community driven maps You'll want to pick up a copy of

this book because This is the first book to comprehensively introduce the Google Maps application development using the Rails development framework You'll be introduced to the very latest changes to the Google Maps API embodied in the version 2 release It is written by four developers actively involved in the creation of location based mapping services For additional info please visit the author's reference site for this book [Understanding Geography and War](#) Steve Pickering, 2016-11-23

By delving into the history of geopolitics and bringing us up to date with cutting edge case studies looking at infrastructure terrain and maps this book will dispel simplistic and misleading notions about the nature of how humans interact with the environment Stops on the way will include critical geopolitics religious geopolitics popular geopolitics feminist geopolitics and newest of all critical quantitative geopolitics More importantly it uncovers new areas of research for the next generation of researchers showing how critical and quantitative methods can be applied to look at how geography and war relate to diverse areas such as disease sport dispossession and immigration **Google Maps Hacks** Rich Gibson, Schuyler Erle, 2006-01-17 Foreword by Jens Lars Rasmussen Google Maps Tech Leads **Quick Hits for Teaching with Digital Humanities** Christopher J. Young, Michael C. Morrone, Thomas C. Wilson, Emma Annette Wilson, 2020-10-06 Quick Hits for Teaching with Digital Humanities Successful Strategies from Award Winning Teachers is an edited collection of 24 articles that aims to introduce faculty administrators and staff to ways in which digital techniques from the arts humanities and social sciences can be incorporated in the classroom These techniques can enhance learning and professional development experiences for undergraduate and graduate students and faculty alike This essential handbook illustrates the breadth of digital humanities across the disciplines with rich examples that bring best practices to life Anyone who teaches at an institution of higher learning will find entry into new digital paradigms As the authors share simple and complex ways to introduce digital humanities into the classroom they expand understandings of what constitutes these current technologies for learning *Google and the Mission to Map Meaning and Make Money* Bart Milner, 2004 This book is the unfolding story of the new technology of Internet Search how Larry Page and Sergey Brin the founders of Google discovered a new way to index the Internet's network of networks by developing Search methods so powerful that they effectively created a free public and universal library out of billions of random documents It also tells how together with the help of a brilliant team built initially at Stanford University they then found a new way of making money through contextual advertising now worth a billion leaving potential competitors particularly Microsoft far behind It shows how Google's founders have also succeeded in insisting that integrity rather than profit remains at the heart of an enterprise that they will continue to control despite the best efforts of Wall Street The second half of this book also seeks to explain the central problems of machine intelligence the difference between words and their meaning or syntax and semantics which had blocked this kind of IT development for half a century until Google's founders discovered that hypertext the unique feature of the Internet that links documents could be measured and mapped to sort millions of apparently similar pages for relevance and significance Google's pursuit of a hugely

ambitious and optimistic American dream that leaves them globally admired and respected keeping their principles intact whilst also creating a fabulously wealthy company is a winning blend of luck jokes mathematical inspiration engineering perspiration deep technical knowledge of the Internet and they would have you believe thousands of highly trained pigeons

The book is 288 pages long including a comprehensive index and 600 item bibliography covering virtually all aspects of Internet Search The print version of the book comes with a free online electronic version with hypertext links to related articles and books designed to make any aspect of the history of Internet search easy to find with a couple of mouse clicks

The book's author Bart Milner is a trained technology journalist and editor who started using the Web in 1984 with a 300 baud acoustic coupler and then became a developer partly to try and solve the question of why computer logic has been unable to deal with meaning and association This background has given him an insight into the inspired but almost accidental way that Google's founders cracked the problem of finding a significant document from billions of unindexed and changing Web pages in a fraction of a second Anyone interested in the future of the Internet and Information Technology should enjoy this fast and fluid story of a company which has become a flagship business of the 21st century by not conceding any of its integrity and principles to the huge pressures of commercial profit whilst providing some of the most elegant and powerful engineering solutions ever seen on the Net
